Improving College Algebra Grades Using Online Homework Completion as a Prerequisite for Quizzes

Oct 15 2019 The goals of this study are to determine if a prescribed treatment would help College Algebra students become more successful and to examine other factors that could have been influencing success. The course used a web-based ALEKS program for homework and quizzes. It was decided to have the students achieve a 75% correct completion level for the online homework assignments before the students would be allowed to attempt the online quiz. It was hypothesized that the knowledge gained while completing the homework would improve quiz grades, improve overall learning, and result in higher passing grades. A pretest and posttest were used to determine how much previous knowledge of the material students had prior to taking the course. A pre-survey was administered to gather demographic information

including gender, age, the last math course the student has taken, the number of semesters since the last math course was taken, and the college corresponding to the student's major. A post-survey was administered to gain information on the student's work ethic, how the student felt about the treatment and about the online math program. The final exam grades were also compared based on the students' SAT, ACT, and COMPASS® scores. The treatment did not raise final exam grades but it did improve the online quiz grades.

Math for Stem and Steam

Dec 29 2020 The "Math for STEM and STEAM" series was written to help teach or reinforce any math skill that might be required for a student to be successful in a STEM lesson, a STEAM lesson, in a makerspace, etc. In this volume, Math for STEM and STEAM: Algebra, each of the major concepts in a standard Algebra course is given its own section and problems. After a list of the problems for a concept, the answers are given so that students can compare their answers to the correct ones. Following the answers are detailed worked solutions to each problem. The answers are given first because many students do not want to see a worked solution immediately upon finding that their answer is not the correct one. At the end of the book are two Final Exams that test whether or not the student has grasped all of the math skills in the book. Because students must be able to solve problems regardless of the order that they appear in a STEM or STEAM learning

situation, the Finals are not in the same order as that given in the Table of Contents. The first Final Exam groups concepts that are similar (although not in the same order as presented in the book), and the second Final Exam completely randomizes the concepts and problems. As with every other problem in the "Math for STEM and STEAM" series, both answers and solutions to all Final Exam questions are included in the book. Our sincere hope is that this book will aid both educators and students in their quest to be effective STEM and STEAM problem solvers!

Elementary and Intermediate Algebra Jan 18 2020 A Unified Text That Serves Your Needs. Most colleges offering elementary and intermediate algebra use two different texts, one for each course. As a result, students may be required to purchase two texts; this can result in a considerable amount of topic overlap. Over the last few years, several publishers have issued combined texts that take

chapters from two texts and merge them into a single book. This has allowed students to purchase a single text, but it has done little to reduce the overlap. The goal of this author team has been to produce a text that was more than a combined text. They wanted to unify the topics and themes of beginning and intermediate algebra in a fluid, non-repetitive text. We also wanted to produce a text that will prepare students from different mathematical backgrounds for college algebra. We believe we have accomplished our goals. For students entering directly from an arithmetic or pre-algebra course, this is a text that contains all of the material needed to prepare for college algebra. It can be offered in two quarters or in two semesters. The new Review Chapter found between chapters 6 and 7 serves as a mid-book review for students preparing to take a final exam that covers the first seven chapters. Finally, we have produced a text that will accommodate those students

placing into the second term of a two-term sequence. Here is where the Review Chapter is most valuable. It gives the students an opportunity to check that they have all of the background required to begin in Chapter 7. If the students struggle with any of the material in the Review Chapter, they are referred to the appropriate section for further review.

The Step-By-Step series originated in the fact that students simply don't need another textbook on Algebra, Calculus, etc. There are already wonderful textbooks on the market in almost every area of mathematics and science. What struggling students do need are more detailed, worked examples than are normally found in even the best textbooks. To solve this problem, every book in the Step-By-Step series contains hundreds of problems with both answers and detailed, worked solutions. In this volume, Step-By-Step: Algebra, each of the major concepts in a standard Algebra course is given its own section and problems. After a list of the problems for a concept, the

answers are given so that students can compare their answers to the correct ones. Following the answers are detailed, worked solutions to each problem. The answers are given first because many students do not want to see a worked solution immediately upon finding that their answer is not the correct one. The Effectiveness of Redesigning College Algebra with a Heavy Focus on Instructional Technology Feb 17 2020 Low success rates in college algebra have been an ongoing problem, and mathematics education researchers have continually looked for ways to improve student performance and learning (Aichele, Francisco, Utley, & Wescoatt, 2011; Gordon, 2008; Thompson & McCann, 2010; Twigg, 2011). This study examined the effectiveness of the pilot semester, spring 2012, of a technology-intensive course redesign of college algebra as compared to a traditional lecture approach at a mid-sized, diverse, urban university in the Midwest. Final exam performance was the main measure for assessing student learning outcomes and for testing thirteen hypotheses; DFW rate, the proportion of students withdrawing or earning a grade of D or F, was used for testing one hypothesis. Between the two instruction types, the

researcher used a quasi-experimental study to compare overall performance on the final exam, performance on the conceptual and procedural questions of the final exam, performance on the individual questions of the final exam, and DFW rates in the course. Overall final exam performance was also compared within each gender, between genders, within two races/ethnicities, and between races/ethnicities. Additionally, performance on the conceptual and procedural questions was compared within each gender and within two races/ethnicities. Final exams were taken by 170 students, 73 students in the redesign approach and 97 students in the traditional approach. T-tests, analyses of covariance, and two-proportion z-tests were used to investigate the hypotheses. In most hypotheses, there were no statistically significant differences between the two types of instruction. One significant difference was found between African-Americans and Caucasians in

both the redesign and traditional sections; however, the covariate, American College Testing (ACT) Mathematics Sub-score accounted for the difference, meaning that type of instruction had no effect. Also, a large difference ($p = 0.0026$) in favor of students in the redesign occurred on one question of the final exam on which students solved a system of linear equations. Lastly, a large difference in course success was observed in DFW rates in favor of the seasoned, traditional lecture approach. The DFW rate was 41% for the redesign approach, but the DFW rate was only 21% for the traditional lecture approach.

[The Impact of a Short-Term Review Treatment Program on Student Success in a College Algebra Course](#) May 22 2020 Which included interactive instruction and practice with a minimum requirement of 3 hours per week for the 4-week treatment period; participants

who were randomly assigned to the control group received an alternative assignment based upon their college algebra coursework using the online program, MyLabsPlus (Pearson Education, n.d.a) that accompanied the class textbook, with a comparable weekly time requirement. After the four-week treatment period, the remaining 11 weeks consisted of the normal course of study and concluded with a comprehensive departmental final exam not prepared by the course instructor. No significant differences in achievement on the final exam were found between the two groups. Also, there were no interaction effects and no main effects for gender and performance on the final exam. Number of prior attempts at college algebra similarly had no impact upon final exam. However, student achievement in the researcher's class was observed to be higher than that found in the other college algebra classes in the department (i.e. the researcher's students

performed higher on the departmental final exam and had a lower failure rate than the overall departmental failure rate). The fact the researcher's college algebra students had greater success when compared to the other college algebra students would suggest other possibilities for future regard. For example, studies comparing use of alternative instructional strategies and/or grading practices may reveal factors that influence college algebra performance. Investigations comparing alternative placement procedures and/or advising strategies might also contribute findings helpful to promoting student success in college algebra.
