Prisoned Chickens, Poisoned Eggs Jul 24 2020 Karen Davis wrote *Prisoned Chickens, Poisoned Eggs* in the mid-1990s to focus attention on the billions of chickens buried alive on factory farms. The book was a catalyst for animal rights activists seeking to develop effective strategies to expose and relieve the plight of chickens. United Poultry Concerns campaign in the 1990s to reveal the U.S. egg industry's cruel practice of starving hens to force them to molt their feathers and cut the cost of egg production was decisive in shifting advocacy attention to chickens and the hidden causes of Salmonella and Campylobacter food poisoning. This new edition documents what has happened since the book first appeared the waging of high-profile campaigns to get rid of battery cages for laying hens, undercover investigations exposing the appalling cruelty to chickens and turkeys by poultry industry workers, globalization of chicken production and its effect on the environment and spread of avian influenza, and how farm animal sanctuaries have become key players in debunking industry myths with truthful accounts of the sensitive and intelligent birds being brutalized in the name of food. It also effectively explains why these birds are so ill, why eating them makes people sick, and what can be done to cure the pathology of the modern poultry industry.

Capacitor Loading Equipment Module (CLEM) Operation Manual Nov 20 2022 The purpose of this manual is to provide the necessary information to safely operate and maintain the capacitor loading equipment module designed and built by EG & G, Inc. for the Lawrence Livermore Laboratory Shiva Laser System. The system consist of two primary pieces of equipment: a Clark forklift and the Platform Assembly (CLEM). The fork-lift transports CLEM to and from capacitor module racks and repair/storage areas, and provides 24-volt d-c power to CLEM. The CLEM system is used to place or remove capacitor modules to or from shelves and provides a platform for transport. Capacitor modules are approximately 15 in. high and 30 in. deep. The widths and weights range from 42 in. to 75 in. and 600 lb. to 1125 lb., respectively. The storage racks are 7 shelves high and spaced 20.5 in. apart. The fourth through seventh shelf are considered the upper level. CLEM also has a manlift and remote control station to provide the operator access to capacitor modules on shelves higher than 5 feet. The CLEM platform translates right and left from the center position to the shelf. A drawbar, which pulls a capacitor module onto the platform or pushes the module from the platform onto the shelf, translates the full width of the platform. Capacitor modules can be handled from either side of CLEM. Maximum-load and critical data are listed on a name plate attached to CLEM. CLEM is finished with a durable, baked-on epoxy powder coating.
