We report the results of a combination of a dictator experiment with either a "social planner" or a "veil of ignorance" experiment. The experimental design and the analysis of the data are based on the theoretical framework proposed in the companion paper by Becker, Häger, and Heufer (BHH, 2013), in which we introduce a "notion of distributive justice" by which individuals trade off equality and efficiency. The purpose of the theoretical framework is to explain preferences in dictator experiments by a combination of selfishness and concerns for distributive justice. Most participants conform very well with the Agreement and Symmetry axioms proposed in BHH; we find that for 80% of participants the evidence is very strong. The experiment therefore demonstrates that most participants' behaviour in dictator experiments can be explained by a combination of selfishness and concerns for distributive justice. We also provide a rough classification of preferences and notions of distributive justice and show that participants' strength of the sense for justice (Karni and Safra 2002b) can be compared nonparametrically.

Practical Program Evaluation for Criminal Justice shows readers how to apply the principles of fiscal responsibility, accountability, and evidence-based practice to criminal justice reform plans. Unlike other policy-based texts, which tend to focus more on implementation than assessment, this book provides applicable, step-by-step instruction on determining an

initiative's necessity prior to its adoption (reducing the risk of wasting resources), as well as how to accurately gauge its effectiveness during initial roll-out stages. The book gradually introduces basic data analysis procedures and statistical techniques, which, once mastered, can be used to prove or disprove a program's worth. Lastly, the book introduces the types of stakeholders who should review evaluation results for quick action, as well as how to best structure reports to ensure their buy-in. This text provides a practical guide to qualitative and quantitative social research techniques integrated with issues from criminal justice. As the 21st Century becomes the era of evidence-based policy, the role of experimental evidence has become more important than ever. It is also critical to improve the quality of field experiments in crime and justice, more of which are now conducted each year than ever before. This book is the indispensable introduction to reading, understanding, evaluating, using and doing randomized field experiments in and around the criminal justice system, including policing bail and pre-trial processes prosecution sentencing probation prison administration parole and re-entry family-based crime prevention community-based crime prevention private security Using case studies of both successful and unsuccessful experiments, this book shows novices and senior scholars alike how experiments can be done better, analyzed better, and put to better use for evidence-based

crime policy. It also shows how experiments can be combined in systematic reviews of evidence, which make the most of their potential to predict the best results from any policy decision. Designed for use in both graduate and undergraduate research methods courses in criminology, criminal justice, sociology, community psychology, education and public health, the book is also designed for mid-career government and business executives in crime prevention and justice policy.

Compact Criminology is an exciting series that invigorates and challenges the international field of criminology. Books in the series are short, authoritative, innovative assessments of emerging issues in criminology and criminal justice - offering critical, accessible introductions to important topics. They take a global rather than a narrowly national approach. Eminently readable and first-rate in quality, each book is written by a leading specialist. Compact Criminology provides a new type of tool for teaching, learning and research, one that is flexible and light on its feet. The series addresses fundamental needs in the growing and increasingly differentiated field of criminology.

RESEARCH METHODS IN CRIMINOLOGY & CRIMINAL JUSTICE The most comprehensive reference work on research designs and methods in criminology and criminal justice This Encyclopedia of Research Methods in Criminology and Criminal Justice offers a

comprehensive survey of research methodologies and statistical techniques that are popular in criminology and criminal justice systems across the globe. With contributions from leading scholars and practitioners in the field, it offers a clear insight into the techniques that are currently in use to answer the pressing questions in criminology and criminal justice. The Encyclopedia contains essential information from a diverse pool of authors about research designs grounded in both qualitative and quantitative approaches. It includes information on popular datasets and leading resources of government statistics. In addition, the contributors cover a wide range of topics such as: the most current research on the link between guns and crime, rational choice theory, and the use of technology like geospatial mapping as a crime reduction tool. This invaluable reference work:

- Offers a comprehensive survey of international research designs, methods, and statistical techniques
- Includes contributions from leading figures in the field
- Contains data on criminology and criminal justice from Cambridge to Chicago
- Presents information on capital punishment, domestic violence, crime science, and much more
- Helps us to better understand, explain, and prevent crime

Written for undergraduate students, graduate students, and researchers, The Encyclopedia of Research Methods in Criminology and Criminal Justice is the first reference work of its kind to offer a comprehensive review of this

important topic. Experimental criminology is a part of a larger and increasingly expanding scientific research and evidence-based movement in social policy. The essays in this volume report on new and innovative contributions that experimental criminology is making to basic scientific knowledge and public policy. Contributors explore cutting-edge experimental and quasi-experimental methods and their application to important and topical issues in criminology and criminal justice, including neurological predictors of violence, peer influence on delinquency, routine activities and capable guardianship, early childhood prevention programs, hot spots policing, and correctional treatment for juvenile and adult offenders. It is the first book to examine the full scope of experimental criminology, from experimental tests - in the field and in the laboratory - of criminological theories and concepts to experimental and quasi-experimental evaluations of crime prevention and criminal justice interventions. Experiments are one of the most important empirical research methods. Empirical research based on the experimental method is becoming a principal approach to—as well as prominent characteristic of—Chinese legal reform. This book describes the application of the experimental method to criminal justice reform. It analyses pilot projects conducted by Chinese criminal procedure researches over the past decade to illustrate the steps and methods of using pilot projects to

advance criminal justice reforms, the successes and the limitations of this approach to promoting reform, and many other lessons that can be learned from these projects. This book, which is written in both Chinese and English, can serve not only as a resource for conducting empirical legal research, but also as a window for understanding criminal justice reform in China. Justice in the Dock is a book about the preeminent English poet (after Shakespeare) trying to make sense of a paradigm case of mass killing - virtually of genocide - that is endorsed by the Ground of All Justice and carried out by an Israelite hero who (if St. Paul can be trusted) is also a saint. This book explores the foundations and potential of a theory of need-based distributive justice, supported by experimental evidence. The core idea is that need-based distributive justice may have some legitimacy advantages over other important principles of distribution, like equality and equity, and therefore involves less dispute over the distribution and redistribution of scarce resources. In seven chapters, eleven scholars from the fields of philosophy, psychology, sociology, political science and economics outline the normative and positive building blocks of such a theory by critically reviewing the literature on distributive justice from their respective disciplinary perspectives. They address important theoretical and practical issues concerning the rationality of needs identification at the individual level and the

recognition of needs at the societal level. They also investigate whether and how the dynamics of distribution procedures that allocate resources according to the need principle leads to social stability, focusing on the economic incentives that arise from need-based redistribution. The final chapter provides a synthesis and outlines a framework for a theory of justice based on ten hypotheses derived from the insights presented. The study of research methodologies can be daunting to many students due to complex terminology, mathematical formulas, and lack of practical examples. Now in its second edition, *Criminal Justice Research Methods: Theory and Practice* offers a straightforward, easy-to-understand text that clarifies this complex subject matter, keeping perplexing research language and associated complexities to a minimum and ensuring that students get a practical grasp of this essential topic. The authors discuss scientific inquiry, establishing a framework for thinking about and understanding the nature of research. They examine various types of research methods in the broad categories of quantitative, qualitative, and evaluation designs and provide coverage of analytical and experimental research designs. The book also examines survey methods, survey instruments, and questionnaires, including wording, organization, and pretesting. It describes the fundamental characteristics of the qualitative approach, setting the stage for an in-depth

discussion of the participant observation and case study methods of research. Other topics include ethical standards of conduct, topic selection, literature review, and guidelines for writing a research report or grand proposal. The second edition features updated examples, reworked exercises, additional discussion points, and new research-in-action sections. Defining a clear approach to the study of research, the book enables student experiencing their initial exposure to this subject to be fundamentally prepared to be proficient researchers in criminal justice and criminology. *Statistics in Criminal Justice* takes an approach that emphasizes the application and interpretation of statistics in research in crime and justice. This text is meant for both students and researchers who want to gain a basic understanding of common statistical methods used in this field. In general, the text relies on a building-block approach, meaning that each chapter helps to prepare the student for the chapters that follow. It also means that the level of sophistication of the text increases as the text progresses. Throughout the text there is an emphasis on comprehension and interpretation, rather than computation. However, as the statistical methods discussed become more complex and demanding to compute, there is increasing use and integration of statistical software. This approach is meant to provide the reader with an accessible, yet sophisticated understanding of statistics that can be used to examine

real-life criminal justice problems with popular statistical software programs. The primary goal of the text is to give students and researchers a basic understanding of statistical concepts and methods that will leave them with the confidence and the tools for tackling more complex problems on their own. New to the 4th Edition · New chapter on experimental design and the analysis of experimental data. · New chapter on multi-level models, including growth-curve models. · New computer exercises throughout the text to illustrate the use of both SPSS and Stata. · Revision of exercises at the end of each chapter that places greater emphasis on using statistical software. · Additional resources on the text's web site for instructors and students, including answers to selected problems, syntax for replicating text examples in SPSS and Stata, and other materials that can be used to supplement the use of the text. This book presents an entirely new answer to the question: "What is fair?" In their radical approach to ethics, Frohlich and Oppenheimer argue that much of the empirical methodology of the natural sciences should be applied to the ethical questions of fairness and justice. Research Methods in Criminal Justice and Criminology is a core text for criminology and criminal justice research methods courses. It strives to offer a general foundation of knowledge that transcends particular topics or subject areas, allowing students to apply research methods and concepts to a multitude of scenarios. Even though the

textbook has been written primarily for criminal justice and criminology majors, there is an underlying recognition that research methods and findings are common among all of the social sciences. This text has been designed to be user-friendly, even when dealing with some fairly complex statistical and theoretical concepts. The most critical points are clearly stated and illustrated with examples chosen to be interesting in their own right. The first self-contained analysis of the use of questionnaire data to test theories of distributive justice. Troubled Experiment exposes the difference between glowing reputation and grim reality of crime in early Pennsylvania. The plight of lawmakers and magistrates, and the sufferings of victims, women, children, and minorities take their places in this tragedy. The authors conclude that through this lens, we see the troubled future of America. Measurement Issues in Criminology examines the techniques and procedures crucial to successful research. Topics appropriate for specific research designs, data sources, and analytic techniques are identified, as well as topics for which such measurement methods are inappropriate. Subjects explored include ethical obligations and social research, the offender's perspective, longitudinal research design, advantages of time series studies over other procedures when investigating important questions of process and change, and the strength and weakness of studies utilizing

secondary data sources. The basic concepts of justice in the workplace are introduced and discussed in this book. Using a variety of methods including questionnaires, laboratory studies and field experiments, issues such as impression management, performance appraisals, employee theft and compliance, and monetary and nonmonetary rewards are highlighted.
