Putting forward a comprehensive view of knowledge with a specific perspective on place and space, this book provides a new perspective on the globalisation of knowledge. Crossing disciplinary boundaries, the principal agenda of this volume is to open up a perspective 'beyond knowledge' - i.e. beyond the interpretation of knowledge as scientific-technical knowledge. Author Martina Fuchs introduces further kinds of knowledge and interpretation which influence managements' perception of globalisation and therefore the knowledge which is going global. She refers to knowledge in the sense of experiences, competencies in the production and labour process, as well as mutually shared mental constructs which are embedded in a context of understanding and interpretation. Exploring beyond the meaning of worldwide knowledge as general open access knowledge, this book also discusses barriers to knowledge, problems of transfer, and the influence of governance and control. Today, some suppliers have grown increasingly powerful and in certain cases, earn revenues that rival or even exceed that of their automaker clients. In the pre-globalisation period, automakers wielded absolute power over their significantly smaller suppliers. This book reveals the upending of this relationship, with the gradual shift in the balance of power from automakers to their suppliers in this era of globalisation. The book examines how suppliers in the global tyres, seats, constant velocity joints (hereafter 'CVJs'), braking systems and automotive semiconductor industries have evolved into powerful oligopolies through a mix of acquisition and organic growth strategies. It also highlights how joint ventures could be strategically deployed as springboards to acquisition, as they enable firms to familiarise themselves with their partners' markets and operations. Moreover, the book analyses the disruption stirred by the entry of well-resourced technology titans into this industry and their inevitable clash with the traditional incumbents. This book is an invaluable reference for anyone interested in learning more about the automakers' and now their suppliers' relentless quest to create market-dominating intelligent driving systems.
