Islamic Perspectives on the New Millennium Nov 11 2021 The chapters are presented in pairs which offer Middle Eastern (and in one case

South Asian) points of view which are matched by Southeast Asian perspectives on each of the six topics. While the media is quick to report on the more violent expressions of Islam, including terrorism, the vigorous debates, which now characterize the intellectual discourse in Muslim communities, are rarely if ever reported. This book not only describes and analyses those debates but also reflects the views of many Muslims across the world, emphasizing the connections and contrasts between the Middle East and Southeast Asia.

New Trends in Intercalation Compounds for Energy Storage Feb 26 2023 Recent advances in electrochemistry and materials science have opened the way to the evolution of entirely new types of energy storage systems: rechargeable lithium-ion batteries, electrochroms, hydrogen containers, etc., all of which have greatly improved electrical performance and other desirable characteristics. This book encompasses all the disciplines linked in the progress from fundamentals to applications, from description and modelling of different materials to technological use, from general diagnostics to methods related to technological control and operation of intercalation compounds. Designing devices with higher specific energy and power will require a more profound understanding of material properties and performance. This book covers the status of materials and advanced activities based on the development of new substances for energy

storage.

Introductory Computer Forensics Aug 08

2021 This textbook provides an introduction to digital forensics, a rapidly evolving field for solving crimes. Beginning with the basic concepts of computer forensics, each of the book's 21 chapters focuses on a particular forensic topic composed of two parts: background knowledge and hands-on experience through practice exercises. Each theoretical or background section concludes with a series of review questions, which are prepared to test students' understanding of the materials, while the practice exercises are intended to afford students the opportunity to apply the concepts introduced in the section on background knowledge. This experience-oriented textbook is meant to assist students in gaining a better understanding of digital forensics through hands-on practice in collecting and preserving digital evidence by completing various exercises. With 20 student-directed, inquiry-based practice exercises, students will better understand digital forensic concepts and learn digital forensic investigation techniques. This textbook is intended for upper undergraduate and graduate-level students who are taking digital-forensic related courses or working in digital forensics research. It can also be used by digital forensics practitioners, IT security analysts, and security engineers working in the IT security industry, particular IT professionals responsible for digital investigation and incident handling or researchers working in these related fields as a reference book.

New Perspectives on Yugoslavia Jul 07 2021

Nearly twenty years after it ceased to exist as a multinational federation, Yugoslavia still has the power to provoke controversy and debate. Bringing together contributions from twelve of the leading scholars of modern and contemporary South East Europe, this volume explores the history of Yugoslavia from creation to dissolution. Drawing on the very latest historical research, this book explains how the country came about, how it evolved and why, eventually, it failed. From the start of the twentieth century, through the First World War, the interwar years and the Second World War, to the road to socialism under President Tito and the wars of Yugoslav succession in the 1990s,

this volume provides up to date analysis of the causes and consequences of a range of events that shaped the development of this remarkable state across its various iterations. The book concludes by examining post-conflict relations in the era of European integration. Traversing ninety years of history, this volume presents a fascinating story of how a country that once served as the model for multiethnic states around the world has now become a byword for ethno-national fragmentation and conflict. Contributors include Dejan Djokić, James Ker-Lindsay, Connie Robinson, Mark Cornwall, John Paul Newman, Tomislav Dulić, Stevan K. Pavlowitch, Dejan Jović, Nebojša Vladislavljević, Florian Bieber, Jasna Dragović-Soso and Eric Gordy.

Nuclear-Pumped Lasers May 17 2022 This book focuses on Nuclear-Pumped Laser (NPL) technology and provides the reader with a fundamental understanding of NPLs, a review of research in the field and exploration of large scale NPL system design and applications. Early chapters look at the fundamental properties of lasers, nuclear-pumping and nuclear reactions that may be used as drivers for nuclear-pumped lasers. The book goes on to explore the efficient transport of energy from the ionizing radiation to the laser medium and then the operational characteristics of existing nuclear-pumped lasers. Models based on Mathematica, explanations and a tutorial all assist the reader's understanding of this technology. Later chapters consider the integration of the various systems involved in NPLs and the ways in which they can be used, including beyond the military agenda. As readers will discover, there are significant humanitarian applications for high energy/power lasers, such as deflecting asteroids, space propulsion, power transmission and mining. This book will appeal to graduate students and scholars across diverse disciplines, including nuclear engineering, laser physics, quantum electronics, gaseous electronics, optics, photonics, space systems engineering, materials, thermodynamics, chemistry and physics.
