Economic Evaluation of Rapid HIV Testing Approaches Jun 23 2020

Introduction HIV testing is an important step in controlling the spread of HIV worldwide. Data from the UNAIDS suggests that about 50% of people living with HIV are unaware of their diagnosis. Canadian estimates suggest that about 25% of HIV infected persons are unaware of their status. Ontario specific estimates suggests that there may be close to 40,000 persons living with HIV in Ontario; however, 27,000 persons are known and documented to be living with HIV in Ontario. The importance of testing and early diagnosis is well documented with evidence demonstrating that early treatment improves outcomes both for infected individuals and the communities they live in. This premise forms the foundation for the highly effective "treatment as prevention" approach. There are currently many HIV testing approaches including serum and saliva-based technologies. Testing can also be categorized based on duration to receipt of test result. With conventional HIV testing, results become available after greater than 24 hours. Rapid testing approaches such as rapid - facility based testing; rapid - location based testing; and rapid - mobile testing ensure results are available within 24 hours and in many cases, within a few minutes. Effectiveness studies of individual approaches have been

conducted, however, studies on the cost-effectiveness of the various approaches in Canada are presently lacking. Most of the available economic studies have been conducted in high prevalence low-income countries, and as such, are not entirely applicable to the Canadian experience. Research objectives The overall aim of the thesis is to investigate the program and performance effectiveness, as well as the economic evidence for the use of rapid HIV testing options compared with existing conventional testing options. To achieve this there were three specific objectives, namely: i. To perform a systematic review of the available cost effectiveness evidence of rapid HIV testing approaches. ii. To perform a second systematic review and determine relative effect estimates for the use of available rapid HIV testing approaches versus conventional approaches iii. To determine the cost effectiveness estimates of the use of these testing approaches as they apply to a Canadian context. Results Rapid HIV Testing for improving uptake of HIV/AIDS services in people with HIV Infection - A Systematic Review and Network Meta-analysis HIV testing has evolved to include rapid testing done in hospitals, non-clinical environments such as bathhouses, places of worship, learning environments and in other cases mobile HIV testing options have also been offered using mobile vans or other motorized vehicles. While there is overall evidence from systematic reviews and meta-analysis of the head-to-head benefits of rapid HIV testing compared to conventional HIV testing, there is insufficient evidence of the indirect benefits of the various types of rapid HIV testing based on location of the tests to identify if there is a differential benefit based on the location where the testing was conducted. This study addressed this by conducting a systematic review and a network-meta-analysis of the HIV testing options. From 3329 articles, we included 4 randomised controlled trials and 1 cluster randomised controlled trial that compared conventional hospital-based HIV testing with rapid HIV testing options stratified by testing

location and conducted both head-to-head and indirect testing comparison of these approaches. For our analysis we used RevMan and NetMetaXL respectively. We present our effect estimates as relative risks. Our analysis showed that with direct head-to-head comparison, both facility and location based rapid voluntary counselling and testing (VCT) were associated with improvements in receipt of results (relative risk (RR) = 2.52; (95% CI: 1.33 to 4.75); and (RR = 1.76; 95% CI: 1.46 to 2.12) respectively. Of note, head to head analysis from two studies including 83,825 subjects showed that rapid facility-based HIV testing was associated with increased HIV case finding among participants (RR = 1.90; 95% CI: 1.05 to 3.43). Heterogeneity between the two studies was low (I² = 0%; p =

AIDS, Drugs and Prevention Nov 28 2020 In developing HIV prevention, community-orientated approaches have emerged within statutory and voluntary sectors and from the communities themselves. This book considers the diverse approaches and problems for professional practice.

Communication Approaches Used in Creating HIV Awareness Feb 12 2022 Sub-Saharan Africa remains the most heavily affected region, accounting for 71% of all new HIV infections. HIV/AIDS affects fundamental rights at the workplace, particularly with respect to discrimination and stigmatization of people living with and affected by the disease. Proper utilization of communication strategies is desirable for effective behavior change hence reduction of the pandemic. The study was carried out to investigate the communication approaches used in creating HIV and AIDS awareness at the workplace. The study was guided by the following specific objectives; to establish whether there are adequate information, education and communication (IEC) materials in schools, to determine whether HIV/AIDS information disseminated on prevention is appropriate at the work place, to examine the strategies used in disseminating HIV/AIDS information at the workplace, to establish teachers perceptions

towards HIV/AIDS and the communicated information and to examine the hindrances encountered when communicating HIV/AIDS issues at the work place.

The Approach of Churches and Church-Related Organizations to HIV/AIDS Programmes: Based on Case Studies in Ethiopia and Southern India Jun 04 2021 Master's

Thesis from the year 2005 in the subject Politics - International Politics - Topic: Development Politics, grade: 1,4, University of Bremen, 25+20Online entries in the bibliography, language: English, abstract: The Acquired Immunodeficiency Syndrome (hereafter, AIDS) pandemic has changed many parts of the world in just a short time despite efforts aimed at controlling it. Human Immunodeficiency Virus (hereafter, HIV)/AIDS is predominantly a sexually transmitted disease that causes illness and death. The groups most at risk are those between 15 and 49 years, often described as the "sexually active", who are the most reproductive people in society and the backbone of the productive forces of any country. The particularities of this disease are not only the large number of victims, but also the suffering of those affected. AIDS is related to two deep dimensions of the human existence: sexuality and death. The impact of HIV/AIDS is multi-dimensional as the disease affects social, economic, political, psychological, cultural, ethical and religious areas. Additionally, the connection of sexuality and death is often linked to the questions of guilt and innocence, chance and causality. Wherever such deep dimensions of human existence are raised, religion may be called upon. The questions of the why and where to are not purely questions of medical science but often involve transcendence and therefore religion. HIV/AIDS and the approach of churches and church-related organizations is a complex issue. In many countries, congregations and parishes are seen to be in the forefront of effective contributions to sexual education and prevention, especially in the form of care and support programmes. AIDS thus mobilizes churches as healing communities. On the other hand,

churches are often accused of being a sleeping giant, of promoting stigmatization and discrimination based on fear and prejudices, of reducing issues related to AIDS to simplistic, rigid sexual and moral judgements. [...]

Preventing HIV in Developing Countries Apr 14 2022

Until now, planners seeking to create HIV prevention programs in developing countries relied on published interventions successfully implemented in the industrialized world. This volume brings together HIV researchers and activists who describe intervention strategies employed primarily in developing countries. With the battle to control HIV continuing, the contributors provide insights from the field as they summarize implementation problems, successes and failures. End-of-chapter summaries and references are key features. HIV program planners, medical and social workers, researchers, and activists will benefit from *Preventing HIV in Developing Countries*.

A Critical Analysis of Strategic Approaches to Address HIV/AIDS in the Caribbean Oct 20 2022

Mathematical and Statistical Approaches to AIDS Epidemiology

Aug 26 2020 The 18 research articles of this volume discuss the major themes that have emerged from mathematical and statistical research in the epidemiology of HIV. The opening paper reviews important recent contributions. Five sections

follow: Statistical Methodology and Forecasting, Infectivity and the HIV, Heterogeneity and HIV Transmission Dynamics, Social Dynamics and AIDS, and The Immune System and The HIV. In each, leading experts in AIDS epidemiology present the recent results. Some address the role of variable infectivity, heterogeneous mixing, and long periods of infectiousness in the dynamics of HIV; others concentrate on parameter estimation and short-term forecasting. The last section looks at the interaction between the HIV and the immune system.

HIV/AIDS Treatment and Care May 23 2020 The WHO Regional Office for Europe has combined its 13 protocols on treatment of and care for people with HIV and AIDS in one volume. The protocols are the cornerstone of the strategic actions that WHO has taken as part of its contribution to achieving the goal of universal access to HIV/AIDS prevention, treatment, care and support services. The protocols were specifically developed for the entire WHO European Region. Together, they represent a comprehensive and evidence-based tool that offers health professionals clear and specific advice on diagnosing and managing a wide range of health issues related to HIV/AIDS for adults, adolescents and children, including antiretroviral treatment, the management of opportunistic infections, tuberculosis, hepatitis, injecting drug use, sexual and reproductive health, the prevention of mother-to-child HIV transmission, immunization, palliative care and post-exposure prophylaxis. [Ed.]

Disease Control Priorities in Developing Countries May 03 2021 Based on careful analysis of burden of disease and the costs of interventions, this second edition of 'Disease Control Priorities in Developing Countries, 2nd edition' highlights achievable priorities; measures progress toward providing efficient, equitable care; promotes cost-effective interventions to targeted populations; and encourages integrated efforts to optimize health. Nearly 500 experts - scientists, epidemiologists, health

economists, academicians, and public health practitioners - from around the world contributed to the data sources and methodologies, and identified challenges and priorities, resulting in this integrated, comprehensive reference volume on the state of health in developing countries.

The HeART of Training Jan 31 2021

HIV/AIDS Apr 02 2021 This 1998 AJN Book of the Year provides an interdisciplinary case management approach to the care of people living with HIV/AIDS. You'll find complete coverage of health promotion and disease prevention; clinical manifestations and management approaches for patients of all ages; maternal/child concerns; psychosocial and psychiatric issues; needs of special populations; cultural and spiritual issues; pharmacologic, nonpharmacologic, alternative, and complementary therapies; legal and ethical concerns; nursing care in community, home, institutional, long-term, residential, and hospice settings; and the overall effectiveness of today's health care system in meeting AIDS patients' needs. A research-based approach to care and when data is not available uses evidence-based practice. Explores both the physiological and psychosocial factors relevant to HIV prevention and health promotion. Offers coverage of maternal/child concerns...the needs of special populations...social, cultural, spiritual and psychiatric issues...legal and ethical considerations...and many other aspects of client care. Examines a wide spectrum of approaches to symptom management, including pharmacologic and non-pharmacologic interventions as well as alternative and complementary therapies. Integrates issues in community-based and long-term care including home care, home infusion therapy, institutional long-term care, residential care, and hospice care. Supports the psychosocial needs of professionals who care for people with HIV disease.

Beyond Condoms Sep 07 2021 This book reflects cutting-edge

science that has only recently become available. It is a comprehensive assortment of new approaches to HIV prevention. It describes a set of prevention strategies that do not solely rely on male condoms, including: the use of HIV antibody testing and 'negotiated safety', abstinence, control of sexually transmitted diseases, treatment advances as prevention, and psychopharmacology to assist with behavior change. It is of interest to HIV prevention scientists, health psychologists, health educators, and public health workers in the communities at risk.

AIDS at 30 Dec 18 2019 Society was not prepared in 1981 for the appearance of a new infectious disease, but we have since learned that emerging and reemerging diseases will continue to challenge humanity. *AIDS at 30* is the first history of HIV/AIDS written for a general audience that emphasizes the medical response to the epidemic. Award-winning medical historian Victoria A. Harden approaches the AIDS virus from philosophical and intellectual perspectives in the history of medical science, discussing the process of scientific discovery, scientific evidence, and how laboratories found the cause of AIDS and developed therapeutic interventions. Similarly, her book places AIDS as the first infectious disease to be recognized simultaneously worldwide as a single phenomenon. After years of believing that vaccines and antibiotics would keep deadly epidemics away, researchers, doctors, patients, and the public were forced to abandon the arrogant assumption that they had conquered infectious diseases. By presenting an accessible discussion of the history of HIV/AIDS and analyzing how aspects of society advanced or hindered the response to the disease, *AIDS at 30* illustrates for both medical professionals and general readers how medicine identifies and evaluates new infectious diseases quickly and what political and cultural factors limit the medical community's response.

Couples of Mixed HIV Status Dec 30 2020 Examine the unique emotional challenges and issues that face couples of mixed HIV status today! Previous books on this subject—mostly written in

the days when HIV/AIDS was considered a fatal rather than a chronic disease—focused on end-of-life issues. However, *Couples of Mixed HIV Status: Clinical Issues and Interventions* addresses the unique emotional challenges facing today's couples of mixed HIV status and provides a conceptual framework for assessment and intervention. The book offers examples of how to apply emotionally focused couple therapy to help them work through issues including disclosure, the fear of HIV transmission, shifts in emotional intimacy, family planning, betrayal, mistrust, and uncertainty. This unique work, its knowledge base, and the interventions you'll find inside, are applicable to any practitioner who provides couple and family therapy—as well as any practitioner who counsels around issues of chronic illness. *Couples of Mixed HIV Status* provides therapists with a range of theoretical approaches to help mixed HIV status couples deal with their issues and concerns. It includes applications of couple therapy approaches that have proved to be particularly effective as well as case studies that demonstrate how different relationship variables may affect therapy. The book presents the findings of a research study involving 44 mixed HIV status couples in the Northeast and is generously illustrated with tables that make complex research results easy to access and understand. Topics covered in *Couples of Mixed HIV Status* include: various approaches to couples therapy the historical context of HIV/AIDS HIV transmission family planning and HIV/AIDS emotionally focused couple therapy disclosure issues attachment theory and much more! *Couples of Mixed HIV Status: Clinical Issues and Interventions* is a valuable resource for therapists and other mental health counselors working with today's couples of mixed HIV status as well as for students of counseling and health related services. Readers who may be in a mixed HIV status relationship or those who are friends and family members of couples living with HIV will also find this book helpful.

The Social Impact of AIDS in the United States Oct 28 2020

Europe's "Black Death" contributed to the rise of nation states, mercantile economies, and even the Reformation. Will the AIDS epidemic have similar dramatic effects on the social and political landscape of the twenty-first century? This readable volume looks at the impact of AIDS since its emergence and suggests its effects in the next decade, when a million or more Americans will likely die of the disease. The Social Impact of AIDS in the United States addresses some of the most sensitive and controversial issues in the public debate over AIDS. This landmark book explores how AIDS has affected fundamental policies and practices in our major institutions, examining: How America's major religious organizations have dealt with sometimes conflicting values: the imperative of care for the sick versus traditional views of homosexuality and drug use. Hotly debated public health measures, such as HIV antibody testing and screening, tracing of sexual contacts, and quarantine. The potential risk of HIV infection to and from health care workers. How AIDS activists have brought about major change in the way new drugs are brought to the marketplace. The impact of AIDS on community-based organizations, from volunteers caring for individuals to the highly political ACT-UP organization. Coping with HIV infection in

prisons. Two case studies shed light on HIV and the family relationship. One reports on some efforts to gain legal recognition for nonmarital relationships, and the other examines foster care programs for newborns with the HIV virus. A case study of New York City details how selected institutions interact to give what may be a picture of AIDS in the future. This clear and comprehensive presentation will be of interest to anyone concerned about AIDS and its impact on the country: health professionals, sociologists, psychologists, advocates for at-risk populations, and interested individuals.

Survival is the First Freedom Jun 16 2022

Building Resilience; Human Security Approaches to AIDS in Africa and Asia Dec 22 2022

HIV/AIDS is not merely a health issue; rather, it has significant implications for other threats that individuals and communities face and is itself further impacted by these other challenges. This volume explores the utility of human security approaches to AIDS in Africa and Asia. It concentrates on programs that emphasize the human aspects of fighting HIV/AIDS, develop comprehensive responses that cut across sectors and disciplines, and aim to protect and empower communities to deal with the challenges of communicable diseases. Drawing upon five case studies from projects supported by the United Nations Trust Fund for Human Security, the study analyzes the added value of human security approaches and the challenges faced by organizations attempting to implement human security projects on the ground.

Mathematical and Statistical Approaches to AIDS

Epidemiology Sep 19 2022 The 18 research articles of this volume discuss the major themes that have emerged from mathematical and statistical research in the epidemiology of HIV. The opening paper reviews important recent contributions. Five sections follow: Statistical Methodology and Forecasting, Infectivity and the HIV, Heterogeneity and HIV Transmission Dynamics, Social Dynamics and AIDS, and The Immune System

and The HIV. In each, leading experts in AIDS epidemiology present the recent results. Some address the role of variable infectivity, heterogeneous mixing, and long periods of infectiousness in the dynamics of HIV; others concentrate on parameter estimation and short-term forecasting. The last section looks at the interaction between the HIV and the immune system.

Preventing and Mitigating AIDS in Sub-Saharan Africa Feb 18

2020 The AIDS epidemic in Sub-Saharan Africa continues to affect all facets of life throughout the subcontinent. Deaths related to AIDS have driven down the life expectancy rate of residents in Zambia, Kenya, and Uganda with far-reaching implications. This book details the current state of the AIDS epidemic in Africa and what is known about the behaviors that contribute to the transmission of the HIV infection. It lays out what research is needed and what is necessary to design more effective prevention programs.

Communication Perspectives on HIV/AIDS for the 21st Century

Mar 01 2021 Reflecting the current state of research into the communication aspects of HIV/AIDS, this volume explores AIDS-related communication scholarship, moving forward from the 1992 publication *AIDS: A Communication Perspective*. Editors Timothy Edgar, Seth M. Noar, and Vicki S. Freimuth have developed this up-to-date collection to focus on today's key communication issues in the HIV/AIDS epidemic. Chapters herein examine the interplay of the messages individuals receive about AIDS at the public level as well as the messages exchanged between individuals at the interpersonal level. Acknowledging how the face of HIV/AIDS has changed since 1992, the volume promotes the perspective that an understanding of effective

communication through both mediated and interpersonal channels is essential to winning the continued battle against AIDS. Issues addressed here include: Social stigma associated with the disease, social support and those living with HIV/AIDS, and the current state of HIV testing Parent-child discussions surrounding HIV/AIDS and safer sexual behavior, and cultural sensitivity relating to developing HIV prevention and sex education programs The effectiveness of health campaigns to impact attitudes, norms, and behavior, as well as the current state of entertainment education and its ability to contribute to HIV prevention News media coverage of HIV/AIDS and the impact of the agenda-setting function on public opinion and policy making Health literacy and its importance to the health and well-being of those undergoing HIV treatment. The role of technological innovations, most notably the Internet, used for both prevention interventions as well as risky behavior The volume also includes exemplars that showcase the diversity of approaches to health communication used to combat the HIV/AIDS epidemic. These cases include interpersonal and mass communication mediums; traditional along with new media and technology; research by academics and practitioners; individual as well as community-based approaches; work based in the United States and internationally; and campaigns directed at at-risk, HIV- positive, as well as general populations. With new topics, new contributors, and a broadened scope, this book goes beyond a revision of the 1992 volume to reflect the current state of communication research on HIV/AIDS across key contexts. It is designed for academics, researchers, practitioners, and students in health communication, health psychology, and other areas of AIDS research. As a unique examination of communication research, it makes an indelible contribution to the growing knowledge base of communication approaches to combating HIV/AIDS.

HIV/AIDS Prevention in Southwestern New Jersey Oct 08 2021

AIDS Epidemiology Mar 13 2022 In addition to a comprehensive discussion of methods for gauging the extent of the epidemic and forecasting AIDS incidence, this book presents methods and results concerning the risks of HIV transmission, the incubation period of HIV infection, markers of disease progression, prevention strategies, including strategies to protect the blood supply, and the evaluation of treatments and vaccines. These topics are presented quantitatively, with an emphasis on the strengths and weaknesses of available data. The book highlights how a naive statistical approach to the design or analysis of such studies can lead to seriously misleading results. The various methods of monitoring and forecasting HIV disease and AIDS incidence are given thorough treatment.

Understanding Prevention for HIV Positive Gay Men Aug 18 2022 This innovative collection offers a wide-ranging palette of psychological, public health, and sociopolitical approaches toward addressing the multi-level prevention needs of gay men living with HIV and AIDS. This book advances our understanding of comprehensive health care, risk and preventive behaviors, sources of mental distress and resilience, treatment adherence, and the experiences of gay men's communities such as communities of color, youth, faith communities, and the house ball community. Interventions span biomedical, behavioral, structural, and technological approaches toward critical goals, including bolstering the immune system, promoting safer sexual practices, reducing HIV-related stigma and discrimination, and eliminating barriers to care. The emphasis throughout these diverse chapters is on evidence-based, client-centered practice, coordination of care, and inclusive, culturally responsive services. Included in the coverage: Comprehensive primary health care for HIV positive gay men From pathology to resiliency: understanding the mental health of HIV positive gay men Emerging and innovative prevention strategies for HIV positive gay men Understanding the developmental and psychosocial

needs of HIV positive gay adolescent males Social networks of HIV positive gay men: their role and importance in HIV prevention HIV positive gay men, health care, legal rights, and policy issues Understanding Prevention for HIV Positive Gay Men will interest academics, researchers, prevention experts, practitioners, and policymakers in public health. It will also be important to research organizations, nonprofit organizations, and clinical agencies, as well as graduate programs related to public health, consultation, and advocacy.

Guidelines for the Psychosocially Assisted Pharmacological Treatment of Opioid Dependence Jul 05 2021 "These guidelines were produced by the World Health Organization (WHO), Department of Mental Health and Substance Abuse, in collaboration with the United Nations Office on Drugs and Crime (UNODC) a Guidelines Development Group of technical experts, and in consultation with the International Narcotics Control Board (INCB) secretariat and other WHO departments. WHO also wishes to acknowledge the financial contribution of UNODC and the Joint United Nations Programme on HIV/AIDS (UNAIDS) to this project. " - p. iv

Disease and Democracy Dec 10 2021 Disease and Democracy is the first comparative analysis of how Western democratic nations have coped with AIDS. Peter Baldwin's exploration of divergent approaches to the epidemic in the United States and several European nations is a springboard for a wide-ranging and sophisticated historical analysis of public health practices and policies. In addition to his comprehensive presentation of information on approaches to AIDS, Baldwin's authoritative book provides a new perspective on our most enduring political dilemma: how to reconcile individual liberty with the safety of the community. Baldwin finds that Western democratic nations have adopted much more varied approaches to AIDS than is commonly recognized. He situates the range of responses to AIDS within the span of past attempts to control contagious disease and discovers

the crucial role that history has played in developing these various approaches. Baldwin finds that the various tactics adopted to fight AIDS have sprung largely from those adopted against the classic epidemic diseases of the nineteenth century—especially cholera—and that they reflect the long institutional memories embodied in public health institutions.
