Embryo Oct 27 2020 In this timely consideration of the nature and rights of human embryos, the authors make a persuasive case that society should neither condone nor publicly fund embryonic stem cell research of any kind.

Essay concerning human understanding (concluded) Defence of Mr. Locke's opinion concerning personal identity. Of the conduct of the understanding. Some thoughts concerning reading and study for a gentleman. Elements of natural philosophy. New method for a common-place book Jan 18 2020

In Defence of the Human Being Feb 23 2023 With the progress of artificial intelligence, the digitalization of the lifeworld, and the reduction of the mind to neuronal processes, the human being increasingly appears to be just a product of data and algorithms. That is, we conceive ourselves “in the image of our machines”, and conversely, we elevate our machines and our brains to new subjects. At the same time, demands for an enhancement of human nature culminate in transhumanist visions of taking human evolution to a new stage. Against this self-reification of the human being, this book defends a humanism of embodiment: our corporeality, vitality, embodied freedom are the foundations of a self-determined existence, which uses these new technologies only as a means, instead of letting them rule us. In

Defence of the Human Being offers an array of interventions directed against a reductionist naturalism or transhumanism in various areas of science and society. As alternative it offers an embodied and enactive account of the human person: we are neither pure minds nor brains, but primarily embodied, living beings in relation with others. Fuchs applied this concept to issues such as artificial intelligence, transhumanism and enhancement, virtual reality, neuroscience, embodied freedom, psychiatry, and finally to the accelerating dynamics of current society which lead to an increasing disembodiment of our everyday conduct of life. Cutting across neuroscience, philosophy, and psychiatry, this important new book applies cutting-edge concepts of embodiment and enactivism to the current scientific, technological and cultural tendencies that will crucially influence our society's development in the 21st century.

Clear Bright Future Sep 18 2022 A passionate defence of humanity and a work of radical optimism from the international bestselling author of Postcapitalism How do we preserve what makes us human in an age of uncertainty? Are we now just consumers shaped by market forces? A sequence of DNA? A collection of base instincts? Or will we soon be supplanted by algorithms and A.I. anyway? In *Clear Bright Future*, Paul Mason calls for a radical, impassioned defence of the human being, our universal rights and freedoms and our power to change the world around us. Ranging from economics to Big Data, from neuroscience to the culture wars, he draws from his on-the-ground reporting from mass protests in Istanbul to riots in

Washington, as well as his own childhood in an English mining community, to show how the notion of humanity has become eroded as never before. In this book Paul Mason argues that we are still capable - through language, innovation and co-operation - of shaping our future. He offers a vision of humans as more than puppets, customers or cogs in a machine. This work of radical optimism asks: Do you want to be controlled? Or do you want something better?

To Loose the Bands of Wickedness Sep 25 2020 Since the Second World War there have been remarkable advances in the field of international humanitarian law, precipitated initially by popular reaction to the genocide and other gross violations of human rights perpetrated by Nazi Germany. A major instrument in the protection of human rights has been the United Nations, whose presence is generally recognised to be non-threatening and impartial. Gross violations of human rights not only cause untold suffering for the victims, but also provoke mass flights of populations on a scale which increasingly threatens to destabilise host countries, and ultimately poses a threat to international peace and security. The international community tries to cope with the ever increasing flow of refugees, but remains reluctant to take coercive measures against the governments directly responsible for massive abuses of human rights, still sheltering behind article 2(7) of the UN Charter, which does not "authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state". Should not governments, in the light of actual events, now consider whether the price of non-intervention is too high, not only on humanitarian grounds, but also because of the escalating costs and the acute political and social problems posed by these mass exoduses? Or is the risk of power abuse for political gain too high because state sovereignty is perceived as absolute. The focus of this study is essentially a practical one. It considers what reforms and additional measures are required to strengthen the UN's capacity

to intervene more effectively on humanitarian issues, particularly those traditionally excluded from UN action by article 2(7) of the Charter. Case histories are included - that of the Kurds in Iraq and the international reaction to the civil strife in Yugoslavia. Every chapter tackles issues from differing financial, legal, philosophical, political and military angles, coming together to form one in-depth and credible whole.

Designing Soldier Systems May 14 2022 This book focuses on contemporary human factors issues within the design of soldier systems and describes how they are currently being investigated and addressed by the U.S. Army to enhance soldier performance and effectiveness. *Designing Soldier Systems* approaches human factors issues from three main perspectives. In the first section, Chapters 1-5 focus on complexity introduced by technology, its impact on human performance, and how issues are being addressed to reduce cognitive workload. In the second section, Chapters 6-10 concentrate on obstacles imposed by operational and environmental conditions on the battlefield and how they are being mitigated through the use of technology. The third section, Chapters 11-21, is dedicated to system design and evaluation including the tools, techniques and technologies used by researchers who design soldier systems to overcome human physical and cognitive performance limitations as well as the obstacles imposed by environmental and operations conditions that are encountered by soldiers. The book will appeal to an international multidisciplinary audience interested in the design and development of systems for military use, including defense contractors, program management offices, human factors engineers, human system integrators, system engineers, and computer scientists. Relevant programs of study include those in human factors, cognitive science, neuroscience, neuroergonomics, psychology, training and education, and engineering.

Remarks on the Defence of the Plea for Human Reason [by J.

Jackson], &c. By the Author of the Plea for Divine Revelation Oct 15 2019

Beyond Human Nature Aug 25 2020 In this provocative, revelatory tour de force, Jesse Prinz reveals how the cultures we live in - not biology - determine how we think and feel. He examines all aspects of our behaviour, looking at everything from our intellects and emotions, to love and sex, morality and even madness. This book seeks to go beyond traditional debates of nature and nurture. He is not interested in finding universal laws but, rather, in understanding, explaining and celebrating our differences. Why do people raised in Western countries tend to see the trees before the forest, while people from East Asia see the forest before the trees? Why, in South East Asia, is there a common form of mental illness, unheard of in the West, in which people go into a trancelike state after being startled? Compared to Northerners, why are people in the American South more than twice as likely to kill someone over an argument? And, above all, just how malleable are we? Prinz shows that the vast diversity of our behaviour is not engrained. He picks up where biological explanations leave off. He tells us the human story.

Embryo Jul 24 2020 Draws on current scientific research and moral philosophy to shed new light on the debate over abortion and stem-cell research, and maintains that, from the moment of conception, embryos are entitled to the full protection of the law.

[In Defence of Realism](#) Apr 20 2020 *In Defence of Realism* is a powerful indictment of the fog of bad philosophy and worse linguistics that has shrouded much contemporary literary theory and criticism. Raymond Tallis, one of the most important critics of post-Saussurean literary theory in the English-speaking world, examines the reasons often cited by critics and theorists for believing that realism in fiction is impossible and verisimilitude a mere literary 'effect'. He clearly demonstrates not only that the arguments of critics hostile to realism are invalid, but that even if they were sound, they would apply equally to anti-realist fiction,

indeed to all intelligible discourse.

Christian Science Jul 04 2021 Excerpt from *Christian Science: Its Legal Status; A Defense of Human Rights* For many centuries the majority of people have lived or died according to the theories of the remedial system longest in the field, whatever those theories might be, even though its remedies plus the most skilful efforts of its practitioners always have been palpably uncertain and inadequate. The familiarity of succeeding generations with the failure of material remedies to cope with disease induced the majority of people to accept this lack of success as inevitable or even natural. If drugs, surgical operations, or inoculations had been used without avail or with disastrous results, philosophy advised patient resignation to what could not be avoided, while theology would try to console sufferers with the view that the Father's will had been done. About the Publisher *Forgotten Books* publishes hundreds of thousands of rare and classic books. Humane Professions Feb 17 2020 In this compelling history of the co-ordinated, transnational defence of medical experimentation in the nineteenth and early twentieth centuries, Rob Boddice explores the experience of vivisection as humanitarian practice. He captures the rise of the professional and specialist medical scientist, whose *métier* was animal experimentation, and whose guiding principle was 'humanity' or the reduction of the aggregate of suffering in the world. He also highlights the rhetorical rehearsal of scientific practices as humane and

humanitarian, and connects these often defensive professions to meaningful changes in the experience of doing science. *Humane Professions* examines the strategies employed by the medical establishment to try to cement an idea in the public consciousness: that the blood spilt in medical laboratories served a far-reaching human good.

In Defense of Human Rights Jan 10 2022 The argument that religion provides the only compelling foundation for human rights is both challenging and thought-provoking and answering it is of fundamental importance to the furthering of the human rights agenda. This book establishes an equally compelling non-religious foundation for the idea of human rights, engaging with the writings of many key thinkers in the field, including Michael J. Perry, Alan Gewirth, Ronald Dworkin and Richard Rorty. Ari Kohen draws on the Universal Declaration of Human Rights as a political consensus of overlapping ideas from cultures and communities around the world that establishes the dignity of humans and argues that this dignity gives rise to collective human rights. In constructing this consensus, we have succeeded in establishing a practical non-religious foundation upon which the idea of human rights can rest. *In Defense of Human Rights* will be of interest to students and scholars of political theory, philosophy, religious studies and human rights.

Trust in Military Teams Sep 06 2021 The objective of this book is to report on contemporary trends in the defence research community on trust in teams, including inter- and intra-team trust, multi-agency trust and coalition trust. The book also considers trust in information and automation, taking a systems view of humans as agents in a multi-agent, socio-technical, community. The different types of trust are usually found to share many of the same emotive, behavioural, cognitive and social constructs, but differ in the degree of importance associated with each of them. *Trust in Military Teams* is written by defence scientists from the USA, Canada, Australia and the UK, under the

auspices of The Transfer Cooperation Programme. It is representative of the latest thinking on trust in teams, and is written for defence researchers, postgraduate students, academics and practitioners in the human factors community.

Performance Under Stress Apr 13 2022 The world is a dangerous place and recent events have served to make it less safe. There are many arenas of conflict and even combat across the world. Such situations are the quintessential expression of stress; you stand in imminent danger and live with the knowledge that you may be attacked, injured or even killed at any moment. How do people perform under these conditions? How do they keep a heightened level of vigilance when nothing may happen in their immediate location for weeks or even months? What happens when the bullets actually start flying? How is it you distinguish friend from foe, and each from innocent bystanders when in immediate peril of your life? Can we design technology to help people make good decisions in these ultimately hazardous situations? To what degree does your membership in a team act to dissipate these particular effects? Can we generate sufficiently stressful field exercises to simulate these conditions and can we train and/or select those most able to withstand such adverse conditions? How will the next generation of servicemen deal with these inherent problems? These are the sorts of questions that Performance Under Stress addresses. This book is derived largely from a multiple-year, multiple university initiative (MURI) on stress and soldier performance on the modern, electronic battlefield. It involved leading researchers from many institutions who have brought their individual expertise to bear on these crucial, contemporary concerns. United by a common research framework, these groups attacked the issue from different methodological and conceptual approaches, ranging from traditional laboratory modeling and experimentation, to realistic simulations; from involved field exercises to personal experiences of actual combat conditions. The insights generated have been

distilled and presented as a benchmark of current understanding and provide future directions for research in this arena. Although this work focuses on soldier stress and soldier performance, the principles that are derived extend well beyond this single application. Their findings can be applied to people facing the demands of the business world or research as much as to those who meet life or death situations, such as homeland security, first responders, and law enforcement personnel.

Defense against Terrorism May 22 2020 Global terrorism is a double-edged threat to democracies. Physically, because of the number of people killed and wounded, structurally, because it threatens social peace and over-reaction tends to undermine our basic values. The authors of the chapters in this book are multinational and interdisciplinary. Their papers were presented for discussion at the Advanced Research Workshop (ARW) held in Skopje (FYROM) 11-14th April 2018 on “Defence Against Terrorism, Enhancing Resilience of Democratic Institutions and Rule of Law”, organized within the NATO Science for Peace and Security Programme. Results can be summarised as follows. Counter-terrorist strategy must aim to achieve less, not more, terrorism. The countries with best results are the ones that cultivate human intelligence, confidence between security services and the local population, together with a tradition of effective respect of the Rule of Law. Militarization of internal security, and intelligence systems mainly based on databases

("big data") and artificial intelligence, though popular, are showing serious limits. More effective democracy, not less, is the key to the resilience of our societies against the "new threats", particularly for confronting the criminal violence of terror. In discussion, some core necessities were identified: to recognize that it is the method used, not the aims, that define criminal organisations as terrorist; that there is a structural link with organized crime for financing and operative support, and that corruption facilitates and protects any illegal activity; social capital must be developed as a fundamental basic tool for enhancing resilience. This book aims to help analyse the networks and contexts that feed terrorism. It provides anyone confronted with security issues an understanding of the negative as well as the positive aspects of specific counter-measures.

Liberal Eugenics Oct 19 2022 In this provocative book, philosopher Nicholas Agar defends the idea that parents should be allowed to enhance their children's characteristics. Gets away from fears of a Huxleyan 'Brave New World' or a return to the fascist eugenics of the past Written from a philosophically and scientifically informed point of view Considers real contemporary cases of parents choosing what kind of child to have Uses 'moral images' as a way to get readers with no background in philosophy to think about moral dilemmas Provides an authoritative account of the science involved, making the book suitable for readers with no knowledge of genetics Creates a moral framework for assessing all new technologies

In Defense of Universal Human Rights Jun 15 2022 Should

African and Muslim-majority countries be obliged to protect LGBT rights, or do such rights violate their cultures? Should Western-based corporations be held liable if their security guards injure union activists in another part of the world, or should such decisions be settled under local or domestic law? In this book, renowned human rights scholar Rhoda E. Howard-Hassmann vigorously defends the universality of human rights, arguing that the entire range of rights is necessary for all individuals everywhere, regardless of sex, color, ethnicity, sexuality, religion or social class. Howard-Hassmann grounds her defense of universality in her conception of human dignity, which she maintains must include personal autonomy, equality, respect, recognition, and material security. Only social democracies, she contends, can be considered fully rights-protective states. Taking issue with scholars who argue that human rights are “Western” quasi-imperialist impositions on states in the global South, and risk undermining community and social obligation, Howard-Hassmann explains how human rights support communities and can only be preserved if states and individuals observe their duties to protect them.

Knowledge and the Body-Mind Problem Apr 01 2021 First published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

In Defense of Politicization of Human Rights Nov 27 2020 In Defense of Politicization of Human Rights: The UN Special Procedures constitutes the first comprehensive study of the United Nations Special Procedures, covering their history, methods of work, institutional status, relationship with other politically driven organs, and processes affecting their development. Special Procedures have existed since 1967, nearly

as long as United Nations Treaty Bodies, but have received only fragmented analysis, normally focused on a few thematic mandates, until the creation of the Human Rights Council in 2006. In seeking to debunk commonly held views about the role of politics in human rights at international level, *In Defense of Politicization of Human Rights* constitutes the first comprehensive study of the United Nations Special Procedures as a system covering their history, methods of work, institutional status, relationship with other politically driven organs, and processes affecting their development. The perspective chosen to analyze the human rights mechanisms most vulnerable to political decisions determining their creation, renewal and operationalization, casts a new light on the extent to which these remain the cornerstone of global accountability in protecting the inherent dignity and worth of individuals as well as groups. International human rights mechanisms' efficiency is normally linked to the work of independent experts keen to push the boundaries of accountability against recalcitrant States determined to defend their sovereignty. As a corollary, progress in this field is associated to the creation and maintenance of political free spaces. Another common presumption is a belief in a differentiated 'North' versus 'South' approach to the promotion and protection of human rights, that find common ground within the prevalent human rights discourses repeated by governmental and non-governmental actors. Through the lenses of the United Nations Special Procedures, *In Defense of Politicization of Human Rights* challenges these and other presumptions informing doctrinal studies, policies and strategies to advance international human rights. Because of the Special Procedures' growing salience and impact in the world of international human rights, this book is likely to become required reading for any student or practitioner of international human rights.

Human Evolution on Trial Dec 29 2020

The Challenge of Human Rights May 02 2021 The Challenge of Human Rights traces the history of human rights theory from classical antiquity through the enlightenment to the modern human rights movement, and analyses the significance of human rights in today's increasingly globalized world. Provides an engaging study of the origin and the philosophical and political development of human rights discourse. Offers an original defence of human rights. Explores the significance of human rights in the context of increasing globalisation. Confronts the major objections to human rights, including the charge of western ethical imperialism and cultural relativism. Argues that human rights logically culminate in an ethical cosmopolitanism to reflect the moral unity of the human race.

Military Strategies for Sustainment of Nutrition and Immune Function in the Field Mar 20 2020 Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients. Severe malnutrition can cause significant alteration in immune response, but even subclinical deficits may be associated with an impaired immune response, and an increased risk of infection. Infectious diseases have accounted for more off-duty days during major wars than combat wounds or nonbattle injuries. Combined stressors may reduce the normal ability of soldiers to resist pathogens, increase their susceptibility to biological warfare agents, and reduce the effectiveness of vaccines intended to protect them. There is also a concern with the inappropriate use of dietary supplements. This book, one of a series, examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field. It reviews the impact of compromised nutrition status on immune function; the interaction of health, exercise, and stress (both physical and psychological) in immune function; and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function. The first part of the book contains the committee's workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops, responses to the Army's questions, conclusions, and recommendations. The rest of the book contains papers contributed by workshop speakers, grouped under such broad topics as an introduction to what is known about immune

function, the assessment of immune function, the effect of nutrition, and the relation between the many and varied stresses encountered by military personnel and their effect on health.

In Defense of Human Dignity Nov 20 2022 Robert Kraynak
And Glenn Tinder Contend that the major challenge of our time is to recover a true and authentic understanding of human dignity and to defend it against threats from modern civilization. In Defense of Human Dignity wrestles with the dilemma that contemporary society has developed a heightened sensitivity to the demands of human dignity while creating radically new dangers to humanity in the form of the totalitarian state, modern technology, genetic engineering, the practical ethics movement, and radical environmentalism. The inspiration for this volume is the publication twenty years ago of the Covey Lectures by Glenn Tinder under the title Against Fate, in which Tinder argued that the sanctity of every individual is the central moral intuition of the Western tradition.
