Auditing is generally considered to be a particularly practical discipline. This hampers theoretical research, as does its complex nature. The unquestioning acceptance and implementation of rules governing auditing practice could lead to poor outcomes. This book provides a theory of auditing that underpins auditing practice. Identifying the objectives of auditing in the context of financial reporting, this book examines underlying beliefs to provide a deeper understanding of the concepts of auditing. In analyzing the field from a theoretical perspective, the author encounters important concepts such as materiality, verification, evidence, risk and professional judgement. Philosophical ideas about the social construction of

reality are employed to explain the role of theory in a building block of the business world. This book is vital reading for auditing scholars globally, whilst its conclusions offer an interesting case study in the philosophy of professional judgement. The Internet bubble has collapsed and the largest bankruptcy in US history, Enron, has made the call for greater transparency in financial reporting more important than ever. Andrew Higson draws attention to what is a 'true and fair view' in reporting and critically examines accounting theory and modern practice. Accountancy encompasses much more than is normally considered, especially from a social responsibility point of view. This book brings fresh ideas and an innovative approach to accountancy theory and practice as well as critical views about professional thinking in accountancy. The reader will find advanced approaches regarding business objectives with social responsibility principles. A new role of accountancy is founded for a sustainable society. The responsibility of individuals is emphasized through behavioural analysis. The book has an interdisciplinary character and will be interesting for students, doctoral students, academics and practitioners as well. The real thread of the book is the risk and responses to the feelings of risk in organizations and also of individuals. On this basis a new role and a new structure of accountancy is offered. Presents complex materials in a clear and understandable manner. Incorporating the latest accounting standards and presenting the most up-to-date accounting theory from the top academic journals in accounting and finance throughout the world. During the 1960s and 1970s a remarkable series of books was produced by academic staff in the field of accounting at the University of Sydney. It was a period when academic research was largely analytical rather than empirically-based. For the most part, the interests of academics at Sydney were largely directed at questioning the status quo - either in the way accounting or auditing was practiced, or in the conventional wisdom expressed in textbooks of the time. The Sydney Accounting Classics series reflects the diversity of interests of the 'Sydney school' at that time. It also recognises the tremendous impact of the foundation professor of accounting, R.J. Chambers. This reprint series ensures that the ideas developed during this period remain available to new generations of scholars and researchers. The Sydney Accounting Classics series is an initiative of the Accounting Foundation, in association with Sydney University Press. Accounting Evaluation and Economic Behavior: This book has been referred to as Chambers' magnum opus, a meticulously researched and argued work describing a framework for accounting practice.

This reprint edition opens the way for a new generation of researchers and scholars to read Chambers' work. The Tangled Web of Price Variation Accounting covers a wide range of topics in the area of price variation - from purchasing power, prices and inflation, to price level variations and serviceability. Collective monograph Creating the 'Big Mess' and its sequel Accounting for Crises use Marx's theory of capitalism to explain why there is no generally accepted theory of financial accounting, and explore the consequences, by studying the history of American accounting theory from c.1900 to 2007. The answer, Creating the 'Big Mess', is first that while late-19th century British accounting principles, founded on the going-concern concept, provided an objective basis for holding management accountable to shareholders for its stewardship of capital, and were accepted by the nascent American profession, they are inchoate. Second, Irving Fisher's economic theory of accounting, based on the assertion that present value is the accountants' measurement ideal, which is subjective, framed early-20th century American accounting theory, which undermined British principles, making them incoherent. In an unregulated, pro-business environment, leading theorists, particularly Henry Rand Hatfield and William A. Paton, Jr., became authorities for management discretion, creating the 'big mess' Hatfield saw in late-1920s American accounting. Accounting for Crises examines the roles of Fisher's theory in promoting the speculation leading to the 1929 Great Crash, aggravating the Great Depression, hindering accounting regulation from the 1930s, producing the Financial Accounting Standard Board's conceptual framework, and facilitating the 2007-2008 Global Financial Crisis.
