People Before Highways Aug 26 2020 Introduction -- People
before highways: stopping highways, building a regional social
movement -- Battling desires: (re)defining progress --
Groundwork: imagining a highwayless future -- Planning for
tomorrow not yesterday: "we were wrong"--New territory--cit
making, searching for control -- Making victory stick: new
dreams, new plans, new park

Annual Report of Division of Highways May 15 2022

Divided Highways Feb 24 2023 In *Divided Highways*, Tom Lewis tells the monumental story of the largest engineered structure ever built: the Interstate Highway System. Here is one of the great untold tales of American enterprise, recounted entirely through the stories of the human beings who thought up, mapped out, poured, paved - and tried to stop - the Interstates. Conceived and spearheaded by Thomas "the Chief" MacDonald, the iron-willed bureaucrat from the muddy farmlands of Iowa who rose to unrivaled power, the highway system was propelled forward through the pathbreaking efforts of brilliant engineers, argued over by politicians of every ideological and moral stripe, reviled by the citizens whose lives it devastated, and lauded as the greatest public works project in U.S. history.

A Treatise on the Law of Highways April 02 2021

Miles and Miles of Texas Jan 23 2020 On the eve of its centennial, Carol Dawson and Roger Allen Polson present almost 100 years of history and never-before-seen photographs that track the development of the Texas Highway Department. An agency originally created "to get the farmer out of the mud," it has gone on to build the vast network of roads that now connect every corner of the state. When the Texas Highway Department (now called the Texas Department of Transportation or TxDOT) was created in 1917, there were only about 200,000 cars in Texas traveling on fewer than a thousand miles of paved roads. Today after 100 years of the Texas Highway Department, the state boasts over 80,000 miles of paved, state-maintained roads that

accommodate more than 25 million vehicles. Sure to interest history enthusiasts and casual readers alike, decades of progress and turmoil, development and disaster, and politics and corruption come together once more in these pages, which tell the remarkable story of an infrastructure 100 years in the making. Rethinking America's Highways
Jul 17 2022 Americans spend hours every day sitting in traffic. And the roads they idle on are often rough and potholed, their exits, tunnels, guardrails, and bridges in terrible disrepair. According to transportation expert Robert Poole, this congestion and deterioration are outcomes of the way America provides its highways. Our twentieth-century model overly politicizes highway investment decisions, short-changing maintenance and often investing in projects whose costs exceed their benefits. In Rethinking America's Highways, Poole examines how our current model of state-owned highways came about and why it is failing to satisfy its customers. He argues for a new model that treats highways themselves as public utilities—like electricity, telephones, and water supply. If highways were provided commercially, Poole argues, people

would pay for highways based on how much they used, and the companies would issue revenue bonds to invest in facilities people were willing to pay for. Arguing for highway investments to be motivated by economic rather than political factors, this book makes a carefully-reasoned and well-documented case for a new approach to highways that is sure to inform future decisions and policies for U.S. infrastructure.

Writing BLUE HIGHWAYS Nov 28 2020 Winner, Distinguished Literary Achievement, Missouri Humanities Council, 2015 The story behind the writing of the best-selling Blue Highways is as fascinating as the epic trip itself. More than thirty years after a 14,000-mile, 38-state journey, William Least Heat-Moon reflects on the four years he spent capturing the lessons of the road on paper—the stops and starts in his composition process, the numerous drafts and painstaking revisions, the depressing string of rejections by publishers, the strains on his personal relationships, and many other aspects of the toil that went into writing his first book. Along the way, he traces the hard lessons learned and offers guidance to aspiring and experienced writers alike. Far from being a technical manual, *Writing Blue Highways: The Story of How a Book Happened* is an adventure story of its own, a journey of “exploration into the myriad routes of heart and mind that led to the making of a book from the first sorry and now vanished paragraph to the last words that came not from a graphite pencil but from a letterpress in Tennessee. Readers will not find a collection of abstract formulations and rules for writing; rather, this book gracefully incorporates examples from Heat-Moon’s own experience. As he explains, “This story might be termed an inadvertent autobiography written not by the traveler who took *Ghost Dancing* in 1978 or

the byroads of America but by a man only listening to him. The blue-roadman hasn't been seen in more than a third of a century and over the last many weeks as I sketched in these pages, I've regretted his inevitable departure." Filtered as the struggles of the "blue-roadman" are through the awareness of someone more than thirty years older with a half dozen subsequent books to his credit, the story of how his first book "happened" is all the more resonant for readers who may not themselves be writers but are interested in the tricky balance of intuitive creation and self-discipline required for any artistic endeavor.

Roads Jan 11 2022 As he crisscrosses America -- driving in search of the present, the past, and himself -- Larry McMurry shares his fascination with this nation's great trails and the culture that has developed around them. Ever since he was a boy growing up in Texas only a mile from Highway 281, Larry McMurry has felt the pull of the road. His town was thoroughly landlocked, making the highway his "river, its hidden reaches a mystery and an enticement. I began my life beside it and I wanted to drift down the entire length of it before I end this book." In Roads, McMurry embarks on a cross-country trip where his route is also his destination. As he drives, McMurry reminisces about the places he's seen, the people he's met, and the books he's read, including more than 3,000 books about travel. He explains

why watching episodes of The Mary Tyler Moore Show might be the best way to find joie de vivre in Minnesota; the scenic differences between Route 35 and I-801; which vigilantes lived in Montana and which hailed from Idaho; and the history of Lewis and Clark, Sitting Bull, and Custer that still haunts Route 2 today. As it makes its way from South Florida to North Dakota and from eastern Long Island to Oregon, Roads is travel writing at its best.

A Policy on Geometric Design of Highways and Streets Sep 19 2022 Highway engineers, as designers, strive to meet the needs of highway users while maintaining the integrity of the environment. Unique combinations of design controls and constraints that are often conflicting call for unique design solutions. A Policy on Geometric Design of Highways and Streets provides guidance based on established practices that are supplemented by recent research. This document is also intended as a comprehensive reference manual to assist in administrative planning, and educational efforts pertaining to design formulation
