Marketing Strategy Oct 10 2021 Marketing Strategy strips away the confusion and jargon that surround what ought to be one of the most straightforward areas of modern business. Marketing and strategy are about relationships between people and this is brought clearly into focus in the text. The marketing practitioner will find this an accomplished book on the role of the marketing director in the successful organization of the year 2000 and beyond. Managers, outside that specialism will be able to understand the pivotal role of marketing in the business strategy process while students will value the bridge it creates between academic theory and practical implementation of marketing in an increasingly competitive environment. Key aims of the book are: * developing a business strategy * devising a marketing strategy * implementing a marketing strategy

Psychology Library Editions: Child Development May 05 2021 Psychology Library Editions: Child Development (20 Volume set) brings together a diverse number of titles across many areas of developmental psychology, from children's play to language development. The series of previously out-of-print titles, originally published between 1930 and 1993, with the majority from the 70s and 80s, includes contributions from many respected authors in the field and charts the progression of the field over this time.

Intelligent Computing Theories and Application Nov 18 2019 This two-volume set LNCS 9771 and LNCS 9772 constitutes - in conjunction with the volume LNAI 9773 - the refereed proceedings of the 12th International Conference on Intelligent Computing, ICIC 2016, held in Lanzhou, China, in August 2016. The 221 full papers and 15 short papers of the three proceedings volumes were carefully reviewed and selected from 639 submissions. The papers are organized in topical sections such as signal processing and image processing; information security, knowledge discovery, and data mining; systems biology and intelligent computing in computational biology; intelligent computing in scheduling; information security; advances in swarm intelligence: algorithms and applications; machine learning and data analysis for medical and engineering applications; evolutionary computation and learning; independent component analysis; compressed sensing, sparse coding; social computing; neural networks; nature inspired computing and optimization; genetic algorithms; signal processing; pattern recognition; biometrics recognition; image processing; information security; virtual reality and human-computer interaction; healthcare informatics theory and methods; artificial bee colony algorithms; differential evolution; memetic algorithms; swarm intelligence and optimization; soft computing; protein structure and function prediction; advances in swarm intelligence: algorithms and applications; optimization, neural network, and signal processing; biomedical informatics and image processing; machine learning; knowledge discovery and natural language processing; nature inspired computing and optimization; intelligent control and automation; intelligent data analysis and prediction; computer vision; knowledge representation and expert system; bioinformatics.

Above and Beyond the Segments Nov 23 2022 Above and Beyond the Segments presents a unique collection of experimental linguistic and phonetic research. Mainly, it deals with the experimental approach to prosodic, and more specifically melodic, aspects of speech. But it also treats segmental phonetics and phonology, second language learning, semantics and related topics. Apart from European languages and dialects (including Dutch, English, Greek, Danish, and dialects from Italy and The Netherlands) there also are chapters on regions as widespread as China, Russia, South Africa, South Sudan, and Surinam. These all testify the enormous diversity of language and speech in the world. This book is of special interest to linguists working on prosodic aspects of speech in general and to those studying non-Western languages in particular.

Current Directions in Dyslexia Research Feb 26 2023 This book covers research on biopsychological aspects of dyslexia reflects on psycholinguistic aspects of dyslexia offers reflections on dyslexia treatment research in general. It points out that in some dyslexics it is not sufficient to treat word identification difficulties alone.

Improving Literacy Instruction With Classroom Research Jul 07 2021 The author details the classroom research cycle and provides tools and sample completed projects to help educators initiate their own research and improve literacy instruction.

"A" Collection of English Words, Not Generally Used, with Their Significations and Original Apr 16 2022

Electrical Engineering Coal India Management Trainee Tier I & II Exam 2020 Guide Dec 20 2019

The Prosodic Word in European Portuguese Sep 21 2022 This series consists of collected volumes and monographs about specific issues dealing with interfaces among the subcomponents of linguistic structure: phonology-morphology, phonology-syntax, syntax-semantics, syntax-morphology, and syntax-lexicon. Recent linguistic research has recognized that the subcomponents of grammar interact in non-trivial ways. What is currently under debate is the actual range of such interactions and their most appropriate representation in grammar, and this is precisely the focus of this series. Specifically, it provides a general overview of various topics by examining them through the interaction of grammatical components. The books function as a state-of-the-art report of research.

Household Words Oct 22 2022

Advances in Handwriting Recognition Aug 20 2022 Frontiers in Handwriting Recognition contains selected key papers from the 6th International Workshop on Frontiers in Handwriting Recognition (IWFHR '98), held in Taejeon, Korea from 12 to 14, August 1998. Most of the papers have been expanded or extensively revised to include helpful discussions, suggestions or comments made during the workshop.

Commentaries on the Seven Segments of Girolamo Cardano May 25 2020 Renaissance philosophy and life of Girolamo Cardano

Communication Sciences and Disorders: From Science to Clinical Practice Feb 14 2022 Communication Sciences and Disorders: From Science to Clinical Practice, Fourth Edition is an excellent introductory text for undergraduate students enrolled in their first course in communication sciences and disorders. Written by experts in the field, this text contains basic information about speech disorders that are related to impairments in articulation, voice, and fluency; language disorders in children and adults; and hearing disorders that cause conductive and sensorineural hearing losses. It includes basic information on the speech, language, and hearing sciences and practical information about assessment and intervention practices. This new edition provides readers with a wide-angle view of communication disorders, stressing a sense of the variety of topics that speech, language, and hearing scientists study and the variety of individuals that Audiologists and Speech-Language Pathologist's treat.

Suffolk Words and Phrases Mar 03 2021

Handbook of Early Literacy Research Dec 12 2021 Current research increasingly highlights the role of early literacy in young children's development--and informs practices and policies that promote success among diverse learners. The Handbook of Early Literacy Research presents cutting-edge knowledge on all aspects of literacy learning in the early years. Volume 2 provides additional perspectives on important topics covered in Volume 1 and addresses critical new topics: the transition to school, the teacher-child relationship, sociodramatic play, vocabulary development, neuroimaging work, Vygotskian theory, findings from international studies, and more.

Municipal Journal and Public Works Aug 28 2020

Native Listening Nov 11 2021 An argument that the way we listen to speech is shaped by our experience with our native language. Understanding speech in our native tongue seems natural and effortless; listening to speech in a nonnative language is a different experience. In this book, Anne Cutler argues that listening to speech is a process of native listening because so much of it is exquisitely tailored to the requirements of the native language. Her cross-linguistic study (drawing on experimental work in languages that range from English and Dutch to Chinese and Japanese) documents what is universal and what is language specific in the way we listen to spoken language. Cutler describes the formidable range of mental

tasks we carry out, all at once, with astonishing speed and accuracy, when we listen. These include evaluating probabilities arising from the structure of the native vocabulary, tracking information to locate the boundaries between words, paying attention to the way the words are pronounced, and assessing not only the sounds of speech but prosodic information that spans sequences of sounds. She describes infant speech perception, the consequences of language-specific specialization for listening to other languages, the flexibility and adaptability of listening (to our native languages), and how language-specificity and universality fit together in our language processing system. Drawing on her four decades of work as a psycholinguist, Cutler documents the recent growth in our knowledge about how spoken-word recognition works and the role of language structure in this process. Her book is a significant contribution to a vibrant and rapidly developing field.

Cellular Neural Networks and Their Applications Jun 25 2020 This volume covers the fundamental theory of Cellular Neural Networks as well as their applications in various fields such as science and technology. It contains all 83 papers of the 7th International Workshop on Cellular Neural Networks and their Applications. The workshop follows a biennial series of six workshops consecutively hosted in Budapest (1990), Munich, Rome, Seville, London and Catania (2000). Contents: On the Relationship Between CNNs and PDEs (M Gilli et al.) Moving Object Tracking on Panoramic Images (P Földesy et al.) Emergence of Global Patterns in Connected Neural Networks (T Shimizu) Configurable Multi-Layer CNN-UM Emulator on FPGA (Z Nagy & P Szolgay) A CNN Based System to Blind Sources Separation of MEG Signals (M Bucolo et al.) Time as Coding Space for Information Processing in the Cerebral Cortex (W Singer) Analyzing Multidimensional Neural Activity via CNN-UM (V Gál et al.) Visual Feedback by Using a CNN Chip Prototype System (P Arena et al.) Computational and Computer Complexity of Analogic Cellular Wave Computers (T Roska) Chaotic Phenomena in Quantum Cellular Neural Networks (L Fortuna & D Porto) Fingerprint Image Enhancement Using CNN Gabor-Type Filters (E Saatci & V Tavsanoğlu) CNN Based Color Constancy Algorithm (L Török & Á Zarándy) Statistical Error Modeling of CNN-UM Architectures: The Grayscale Case (P Földesy) MEMS, Microsystems and Nanosystems (M E Zaghloul) Texture Segmentation by the 64x64 CNN Chip (T Szirányi) Teaching CNN and Learning by Using CNN (P Arena et al.) Novel Methods and Results in Training Universal Multi-Nested Neurons (R Dogaru et al.) Test-Bed Board for 16x64 Stereo Vision CNN Chip (M Salerno et al.) and other papers Readership: Graduate students, researchers, lecturers and industrialists.

Recent Advances in Natural Language Processing V Feb 20 2020 This volume brings together revised versions of a selection of papers presented at the Sixth International Conference on "Recent Advances in Natural Language Processing" (RANLP) held in Borovets, Bulgaria, 27-29 September 2007. These papers cover a wide variety of Natural Language Processing (NLP) topics: ontologies, named entity extraction, translation and transliteration, morphology (derivational and inflectional), part-of-speech tagging, parsing (incremental processing, dependency parsing), semantic role labeling, word sense disambiguation, temporal representations, inference and metaphor, semantic similarity, coreference resolution, clustering (topic modeling, topic tracking), summarization, cross-lingual retrieval, lexical and syntactic resources, multi-modal processing. The aim of this volume is to present new results in NLP based on modern theories and methodologies, making it of interest to researchers in NLP and, more specifically, to those who work in Computational Linguistics, Corpus Linguistics, and Machine Translation.

(Free Sample) Civil Engineering Coal India Management Trainee Tier I & II Exam 2020 Guide Jan 21 2020

Advances in Natural Language Processing Jan 13 2022 This book constitutes the refereed proceedings of the 4th International Conference, ESTAL 2004, held in Alicante, Spain in October 2004. The 42 revised full papers presented were carefully reviewed and selected from 72 submissions. The papers address current issues in computational linguistics and monolingual and multilingual intelligent language processing and applications, in particular written language analysis and generation; pragmatics, discourse, semantics, syntax, and morphology; lexical resources; word sense disambiguation; linguistic, mathematical, and morphology; lexical resources; word sense disambiguation; linguistic, mathematical, and psychological models of language; knowledge acquisition and representation; corpus-based and statistical language modeling; machine translation and translation tools; and computational lexicography; information retrieval; extraction and question answering; automatic summarization; document categorization; natural language interfaces; and dialogue systems and evaluation of systems.

ICASSP 90 Jan 01 2021

Phrase Mining from Massive Text and Its Applications Feb 02 2021 A lot of digital ink has been spilled on "big data" over the past few years. Most of this surge owes its origin to the various types of unstructured data in the wild, among which the proliferation of text-heavy data is particularly overwhelming, attributed to the daily use of web documents, business reviews, news, social posts, etc., by so many people worldwide. A core challenge presents itself: How can one efficiently and effectively turn massive, unstructured text into structured representation so as to further lay the foundation for many other downstream text mining applications? In this book, we investigated one promising paradigm for representing unstructured text, that is, through automatically identifying high-quality phrases from innumerable documents. In contrast to a list of frequent n-grams without proper filtering, users are often more interested in results based on variable-length phrases with certain semantics such as scientific concepts, organizations, slogans, and so on. We propose new principles and powerful methodologies to achieve this goal, from the scenario where a user can provide meaningful guidance to a fully automated setting through distant learning. This book also introduces applications enabled by the mined phrases and points out some promising research directions.

Discovery Science Oct 30 2020 The LNAI series reports state-of-the-art results in artificial intelligence research, development, and education, at a high level and in both printed and electronic form. Enjoying tight cooperation with the R & D community, with numerous individuals, as well as with prestigious organizations and societies, LNAI has grown into the most comprehensive artificial intelligence research forum available. The scope of LNAI spans the whole range of artificial intelligence and intelligent information processing including interdisciplinary topics in a variety of application fields. The type of material published traditionally includes proceedings (published in time for the respective conference) post-proceedings (consisting of thoroughly revised final full papers) research monographs (which may be based on PhD work) More recently, several color-cover sublines have been added featuring, beyond a collection of papers, various added-value components; these sublines include tutorials (textbook-like monographs or collections of lectures given at advance courses) state-of-the-art surveys (offering complete and mediated coverage of a topic) hot topics (introducing emergent topics to the broader community) In parallel to the printed book, each new volume is published electronically in LNCS Online. Book jacket.

Computational Linguistics and Intelligent Text Processing Dec 24 2022 This two-volume set, consisting of LNCS 7816 and LNCS 7817, constitutes the thoroughly refereed proceedings of the 13th International Conference on Computer Linguistics and Intelligent Processing, CICLING 2013, held on Samos, Greece, in March 2013. The total of 91 contributions presented was carefully reviewed and selected for inclusion in the proceedings. The papers are organized in topical sections named: general techniques; lexical resources; morphology and tokenization; syntax and named entity recognition; word sense disambiguation and coreference resolution; semantics and discourse; sentiment, polarity, subjectivity, and opinion; machine translation and multilingualism; text mining, information extraction, and information retrieval; text summarization; stylometry and text simplification; and applications.

Guide for Indian Air Force Airman Group C Civilian Posts Exam 2021 Mar 23 2020

Medical Writing Apr 23 2020 A new edition of this very helpful book which provides the practical information necessary to turn a complex series of results and ideas into clear, simple, unambiguous text, without loss of style or individuality. A new chapter has been included which focuses on clarity of data presentation in graph form. Each chapter has also been updated to include coverage of the latest writing trends and jargon. Many new examples of the good and the bad in medical writing, drawn from published work, are deftly used alongside apt cartoons to illustrate the argument. **Scale-Space Theories in Computer Vision** May 17 2022 This volume constitutes the refereed proceedings of the Second International Conference on Scale-Space Theories in Computer Vision, Scale-Space'99, held in Corfu, Greece, in September 1999. The 36 revised full papers and the 18 revised posters presented in the book were carefully reviewed and selected from 66 high-quality submissions. The book addresses all current aspects of this young and active field, in particular geometric Image flows, nonlinear diffusion, functional minimization, linear scale-space, etc.

Primary Education Jul 19 2022

Talking Texts Apr 04 2021 This volume examines how oral and written language function in school learning, and how oral texts can be successfully inter-connected to the written texts that are used on a daily basis in schools. Rather than argue for the prominence of one over the other, the goal is to help the reader gain a rich understanding of how both might work together to create a new discourse that ultimately creates new knowledge. Talking Texts: Provides historical background for the study of talk and text Presents examples of children's and adolescents' natural conversations as analyzed by linguists Addresses talk as it interfaces with domains of knowledge taught in schools to show how talk is related to and may be influenced by the structure, language, and activities of a specific discipline. Bringing together seminal lines of research to create a cohesive picture of discourse issues germane to classrooms and other learning settings, this volume is an essential resource for researchers, graduate students, classroom teachers, and curriculum specialists across the fields of discourse studies, literacy and English education, composition studies, language development, sociolinguistics, and applied linguistics.

Introduction to Natural Language Processing Aug 08 2021 A survey of computational methods for understanding, generating, and manipulating human language, which offers a synthesis of classical representations and algorithms with contemporary machine learning techniques. This textbook provides a technical perspective on natural language processing—methods for building computer software that understands, generates, and manipulates human language. It emphasizes contemporary data-driven approaches, focusing on techniques from supervised and unsupervised machine learning. The first section establishes a foundation in machine learning by building a set of tools that will be used throughout the book and applying them to word-based textual analysis. The second section introduces structured representations of language, including sequences, trees, and graphs. The third section explores different approaches to the representation and analysis of linguistic meaning, ranging from formal logic to neural word embeddings. The final section offers chapter-length treatments of three transformative applications of natural language processing: information extraction, machine translation, and text generation. End-of-chapter exercises include both paper-and-pencil analysis and software implementation. The text synthesizes and distills a broad and diverse research literature, linking contemporary machine learning techniques with the field's linguistic and computational foundations. It is suitable for use in advanced undergraduate and graduate-level courses and as a reference for software engineers and data scientists. Readers should have a background in computer programming and college-level mathematics. After mastering the material presented, students will have the technical skill to build and analyze novel natural language processing systems and to understand the latest research in the field.

The Psychology of Language Oct 18 2019 This comprehensive study of the psychology of language explores how we speak, read, remember, learn and understand language. The author examines each of these aspects in detail.

The Texture of Discourse Jun 06 2021 The aim of this monograph is to give impetus to research into one of the central questions in discourse studies: what makes a sequence of sentences or utterances a discourse? The theoretical framework for describing the possibilities of discourse continuation is delineated by two principles: the discursive and the dialogic principle. The chord of discourse is unfolded in a tripartite wire: Conjunction, Adjunction and Interjunction, each containing three aspects, leading to a Connectivity Model. This new three-by-three taxonomy of discourse relations incorporates findings from several theories and approaches that have evolved over the last three decades, including Systemic Functional Linguistics and Rhetorical Structure Theory. In comparing this model to other models, this book presents a state-of-the-art of discourse relation analysis combined with detailed accounts of many examples. This monograph furthermore proposes a new way of presenting discourse structures in connectivity graphs followed by eleven commandments for the segmentation and labeling of discourse, and three procedures for disambiguation if more labels are applicable. This study can provide a base for corpus linguistic analysis on discourse structures, computational approaches to discourse generation and cognitive experimental research of discourse competence."

Brandial '06 Sep 28 2020

The Internal Organization of Phonological Segments Jan 25 2023 This book contains a number of studies on modern approaches to phonological segment structure. There are three main sections: (i) a general section, concerned with the basic theory of segmental structure, features, and the organization of segmental structure into feature-geometric trees, (ii) the representation and behaviour of nasality, and (iii) the representation and behaviour of the laryngeal features.

First Exposure to a Second Language Jul 27 2020 The initial state of learner spontaneous input processing in foreign language learning, as well as the extent to which this processing leads to intake, is of central importance to theoreticians and teachers alike. In this collection of original studies, leading experts examine a range of issues, such as what learners do when faced with a language they know little or nothing about, what factors appear to mediate beginning learners' processing of input, how beginners treat two types of information - form and meaning - in the input, and how adult cognition deals with stimulus frequency at this initial stage. This book provides a microscopic view on learners' processing of foreign language input at the early stages of learning, and evaluates a variety of methodological options within the context of ab initio processing of foreign languages other than English, such as German, Korean, Norwegian, Polish, and Spanish.

Handbook of Learning Disabilities, Second Edition Sep 09 2021 Widely regarded as the standard reference in the field, this comprehensive handbook presents state-of-the-art knowledge about the nature and classification of learning disabilities (LD), their causes, and how individuals with these difficulties can be identified and helped to succeed. Best practices are described for supporting student performance in language arts, math, and other content areas. Contributors also identify general principles of effective instruction and review issues in service delivery within response-to-intervention (RTI) frameworks. The book critically examines the concepts and methods that guide LD research and highlights important directions for future investigation. New to This Edition: *Incorporates key advances in identifying and remediating LD, with particular attention to the role of RTI. *Chapters on social cognitive, behavioral genetic, and neurobiological aspects. *Chapters on adolescents and adults with LD. *Chapters on spelling instruction, history instruction, and classroom technology applications. *Chapter synthesizing 21st-century advances in LD research methods, plus chapters on advanced statistical models, single-case designs, and meta-analysis.

Frequency and the Emergence of Linguistic Structure Nov 30 2020 A mainstay of functional linguistics has been the claim that linguistic elements and patterns that are frequently used in discourse become conventionalized as grammar. This book addresses the two issues that are basic to this claim: first, the question of what types of elements are frequently used in discourse and second, the question of how frequency of use affects cognitive representations. Reporting on evidence from natural conversation, diachronic change, variability, child language acquisition and psycholinguistic experimentation the original articles in this book support two major principles. First, the content of people's interactions consists of a preponderance of subjective, evaluative statements, dominated by the use of pronouns, copulas and intransitive clauses. Second, the frequency with which certain items and strings of items are used has a profound influence on the way language is broken up into chunks in memory storage, the way such chunks are related to other stored material and the ease with which they are accessed to produce new utterances.

Artificial Intelligence: Methodology, Systems, and Applications Jun 18 2022 This book constitutes the refereed proceedings of the 11th International Conference on Artificial Intelligence: Methodology, Systems, and Applications, AIMS 2004, held in Varna, Bulgaria in September 2004. The 52 revised full papers presented were carefully reviewed and selected from 176 submissions. The papers are organized in topical sections on ontology engineering, semantic Web services, knowledge representation and processing, machine learning and data mining, natural language processing, soft computing, neural networks, e-learning systems, multiagent systems, pattern recognition, intelligent decision making, and information retrieval.

Word Segmentation for Japanese and English Speakers Mar 15 2022 Phonotactic knowledge and experience-independent knowledge have both been argued to cue word segmentation in prior studies (e.g. Ettliger, Finn, & Hudson Kam, 2011; McQueen, 1998). This dissertation attempts to compare the effect of two types of cues, language-independent and language-dependent knowledge, on word segmentation. The specific cues selected for each type were the Sonority Sequencing Principle (SSP) as a language-independent cue and geminates (double consonants) as a

language-dependent cue. The effectiveness of the cues was determined by two groups of speakers with different language background, native Japanese and native American English speakers. The two languages were chosen particularly because they contrast in two aspects relevant to these specific cues: (1) Japanese has a simple syllable structure, no consonant clusters (except for consonant-glide sequences), while English has an extensive set of bi-consonantal clusters and limited tri-consonantal clusters. (2) Japanese has a phonemic consonant length contrast (singletons vs. geminates), while English lacks such a contrast. Details of (1) are relevant for testing the SSP, and those of (2) for testing geminates as a cue to word segmentation. The results from three artificial language learning experiments (Experiment 1, 2, and 3) consistently indicate, contrary to prior claims, that the (language-independent) SSP is not a reliable cue to segment speech strings for both language groups, regardless of the difference in syllable structure. On the other hand, knowledge about language-dependent geminates seems to be a good predictor as to how speakers segment words from a string with word-internal geminates (Experiment 4 and 5). Japanese speakers, whose language has a phonemic contrast between geminates and singleton consonants, consistently segmented the speech string so that geminates were retained within words, whereas English speakers without such a contrast in their native language tended to break up the string at geminates. Moreover, the results indicate that listeners are able to rely heavily on the transitional probability (TP) of the syllables to segment the string, primarily when the structure of the stimulus words in the target speech string is simple. From the results of this study, language-dependent knowledge seems to be more effective than language-independent knowledge in word segmentation.
