This book provides analysis and critique of the dual protection of human rights in Europe by assessing the developing legal relationship between the Court of Justice of the European Union (CJEU) and the European Court of Human Rights (ECtHR). The book offers a comprehensive consideration of the institutional framework, adjudicatory approaches, and the protection of material rights within the law of the European Union and the European Convention on Human Rights (ECHR). It particularly explores the involvement and participation of stakeholders in the functioning of the EU and the ECtHR, and asks how well the new legal model of 'the EU under the ECtHR' compares to current EU law, the ECHR and general international law. Including contributions from leading scholars in the field, each chapter sets out specific case-studies that illustrate the tensions and synergies emergent from the EU-ECHR relationship. In so doing, the book highlights the overlap and dialectic between Europe's two primary international courts. The book will be of great interest to students and researchers of European Law and Human Rights. The workbook is design to help the user retain key chapter content. Included within this resource are chapter objective questions, key term definition queries, multiple choice, fill in the blank and true or false problems. In this book various perspectives on fundamental rights in the fields of public and private international law are innovatively covered. Published on the occasion of the 50th anniversary of the T.M.C. Asser Instituut in The Hague, the collection reflects the breadth and scope of the Institute's research activities in the fields of public international law, EU law, private international law and international and European sports law. It does so by shedding more light on topical issues – such as drone warfare, the fight against terrorism, the international trade environment nexus and forced arbitration – that can be related to the theme of fundamental rights, which runs through all these four areas of research. Points of divergence and areas of common ground are uncovered in contributions from both staff members and distinguished external authors, having long-standing academic relations with the Institute. The Editors of this book are all staff members of the T.M.C. Asser Instituut, each of them representing one of the areas of research the Institute covers. Proposing a new view of global justice based on natural law, this book presents a discussion of the key ethical values in contemporary medicine and health, notably in relation to neglected diseases like malaria, Ebola and Zika. The lack of treatments for such diseases points to a global health crisis. Thana Cristina de Campos provides a general framework, based on global commutative justice, for discussion of the ethical responsibilities of international stakeholders, mapping the varying duties they have, and their content and force. She also addresses the urgent need for reforms to the international legal rules on bioethics, notably the system of intellectual property rights. These ideas will be of interest to those who are looking for a more nuanced view of the human right to health than that provided by advocates in the globalist mainstream. Food, water, health, housing, and education are as fundamental to human freedom and dignity as privacy, religion, or speech. Yet only recently have legal systems begun to secure these fundamental individual interests as rights. This book looks at the dynamic processes that render economic and social rights in legal form. It argues that processes of interpretation, enforcement, and contestation each reveal how economic and social interests can be protected as human and constitutional rights, and how their protection changes public law. Drawing on constitutional examples from South Africa, Colombia, Ghana, India, the United Kingdom, the United States and elsewhere, the book examines innovations in the design and role of institutions such as courts, legislatures, executives, and agencies in the organization of social movements and in the links established with market actors. This comparative study shows how legal systems protect economic and social rights by shifting the focus from minimum bundles of commodities or entitlements to processes of value-based, deliberative problem solving. Theories of constitutionalism and governance inform the potential of this approach to reconcile economic and social rights with both democratic and market principles, while addressing the material inequality, poverty and social conflict caused, in part, by law itself. Engaging exercises enhance and reinforce your comprehension with matching, multiple-choice, fill-in-the-blank, and true/false questions. Independent learning activities challenge you to apply your knowledge to practice. Procedure checklists make it easier to learn and practice medication

Dorland's: The first and last word in medicine for over 110 years A Textbook of B.Sc. Mathematics Abstract Algebra In recent years the European Union has developed a comprehensive strategy to conclude free trade agreements which includes not only prominent trade partners such as Canada, the United States and Japan but also numerous developing countries. This book looks at the existing WTO law and at the new EU free trade agreements with the Caribbean and sub-Saharan Africa through the lens of the human right to adequate food. It shows how the clauses on the import and export of food included in recent free trade agreements limit the capacity of these countries to implement food security policies and to respect their human rights obligations. This outcome appears to be at odds with international human rights law and dismissive of existing human rights references in EU-founding treaties as well as in treaties between the EU and developing states. Yet, the book argues against the conception in human rights literature that there is an inflexible agenda encoded in world trade law which is fundamentally conflictual with non-economic interests. The book puts forward the idea that the European Union is perfectly placed to develop a narrative of globalisation considering other areas of public international law when negotiating trade agreements and argues that the EU does have the competences and influence to uphold a role of international leadership in designing a sustainable global trading system. Will the EU be ambitious enough? A timely contribution to the growing academic literature on the relation between world trade law and international human rights law, this book imagines a central role for the EU in reconciling these two areas of international law. National bestselling author of APOCALYPSE NEVER skewers progressives for the mishandling of America's faltering cities. Progressives claimed they knew how to solve homelessness, inequality, and crime. But in cities they control, progressives made those problems worse. Michael Shellenberger has lived in the San Francisco Bay Area for thirty years. During that time, he advocated for the decriminalization of drugs, affordable housing, and alternatives to jail and prison. But as homeless encampments spread, and overdose deaths skyrocketed, Shellenberger decided to take a closer look at the problem. What he discovered shocked him. The problems had grown worse not despite but because of progressive policies. San Francisco and other West Coast cities — Los Angeles, Seattle, Portland — had gone beyond merely tolerating homelessness, drug dealing, and crime to actively enabling them. San Fransicko reveals that the underlying problem isn't a lack of housing or money for social programs. The real problem is an ideology that designates some people, by identity or experience, as victims entitled to destructive behaviors. The result is an undermining of the values that make cities, and civilization itself, possible.
